MOMENTUM

Intelligent Transportation Systems

Intelligent Transportation Systems (ITS) investments use technology to make our transportation safer, reliable, and more efficient.

Our Plan:

- Commits $600 million to technologies like traffic signal optimization, ramp metering and freeway message boards to help you get around more quickly and safely.
- Invests in technology to keep our transportation system modern in a rapidly changing environment, supporting regional competitiveness and economic prosperity.
- Modernizes and optimizes our current infrastructure, using technology to get more out of the system we've already built.

Transportation Demand Management

Transportation Demand Management (TDM) utilizes strategies and policies to maximize travel options. MOMENTUM commits $250 million to optimize the region's existing transportation infrastructure, maximizing the investments we've already made. Robust regional TDM strategies in conjunction with well-designed infrastructure can significantly improve congestion — saving time and frustration for us all.

Emerging Technology

Our region plans to invest over $250 million in emerging technology, so that we're ready to test and adopt innovative transportation solutions, staying nimble and responsive to an uncertain future.

MOMENTUM will build a more modern transportation system that is flexible and responsive to growth and needs.
