How we track benefits

finova

New Products

New changes that enhance the products you sell to your customers

- They can also alter the available configuration points meaning you can change the way you interact with your customers.
- There can simply be a new financial product your offer your customers.
- The feature may relate to the Application (origination) or In-Life (servicing) lifecycles (or even both).

Risk Management

These initiatives reduce risk burdens and potential losses to the lender.

- They may be provided by adding new third-party providers allowing lenders to implement new controls.
- They may be delivered in real-time or in batch mode dependent on the urgency of the risk.
- They can include extending existing solutions to support further configuration options.

User Experience

These are changes designed to make the end user experience better

- These changes may change the medium a customer journey is delivered over.
- They can also affect processes used by your operational teams.
- They may look to replace a manual process with automation.
- Simply they should make the end user happier!

Ops Efficiencies

These solutions reduce your cost of running your operation.

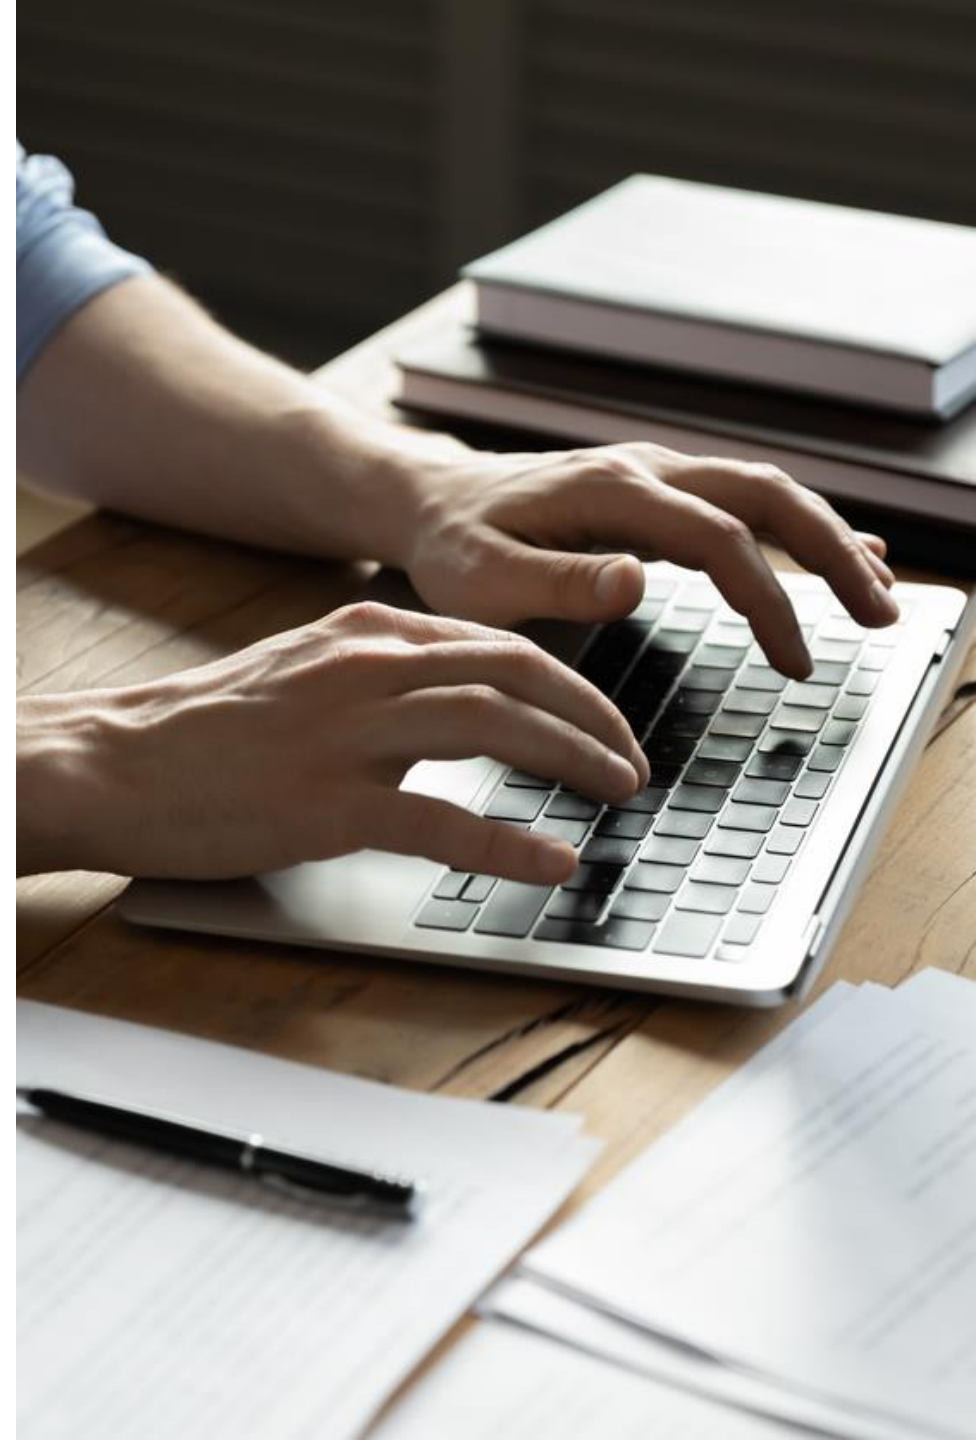

- They should reduce manual operation processes.
- They can be achieved by the introduction of third-party data or solutions.
- They should drive improvement in profit and reduction in costs
- They will make your Execs happier!

The above can be in any combination!
