Avvir is a BIM-centric platform helping firms identify deviations and seamlessly push them back to your BIM.

Your search for an Openspace alternative is finally over. Need to make better use of your Lidar scans? Or Full-Service Field Capture? No technical headaches, no lacking BIM integration. Avvir is a flexible platform to enable construction teams to identify errors, track progress, and update the BIM model.

A new level of analysis for the built world.

With Avvir's reality analysis platform, you can reduce costly rework by detecting mistakes and taking immediate action, transforming your BIM into an official system of record, taking project insights to the next level with automated progress and earned value tracking.

Avvir works with you

We're built to fit within the larger construction technology ecosystem. We work seamlessly with your existing systems from photo capture, to construction workflow management to laser scans and 360 photos.
