Zendoors Inc. Manor House Collection: Recommended Paint

Thank you for your interest in the products and services of Zendoors Inc. This document serves the purpose of educating our customers about the recommended paint process for our Manor House Collection.

Base Material

The Manor House Collection is manufactured using ultra moisture resistant, exterior grade MDF. This material offers wonderful exterior durability when protected with the correct paint and primer combination. Further, the steel rails between each section are also paintable once primed.

Preparation

Although our garage doors are paint ready, Zendoors recommends that all doors are given a light, high grit sanding before applying primer and paint for the best quality finish.

Primer

Zendoors recommends a high-quality acrylic urethane based primer. The recommended coating is two coats of primer, with appropriate dry time between each coat, as recommended by the primer manufacturer.

Topcoat

Zendoors recommends a high-quality acrylic latex based paint. The recommended coating is two coats of paint, with appropriate dry time between each coat, as recommended by the paint manufacturer.
