

NORTHUMBRIA POLICE

## Protecting and improving critical frontline processes.

Serving a population of 1.5 million people, Northumbria Police required a secure DAM solution to digitise and protect 850,000+ individual crime-related items.

### The challenge

A lack of digital asset management within the force had resulted in:

- No centralised control or governance
- No standardised digital fingerprinting
- Data Protection, MOPI, GDPR risks
- Significant resource needed to physically deliver evidence to criminal justice stakeholders

**By giving the force a complete digital overhaul, Aetopia's DAM system has reduced the spend on physical storage consumables by £125,000, improved the quality of criminal case file production by 4.8%, and reduced the "time to share" evidence with the courts from nine days to zero.**

### Our customer-driven approach

- Implemented a Criminal Justice Evidence sharing portal
- Rigorous disaster recovery plan
- Integrated with other critical police systems
- Enabled live streaming for courts and other stakeholders

### Aetopia DAM for Law Enforcement

Our law enforcement DAM enables police forces to securely organise, store, and share all kind of digital assets. From bodycam footage to CCTV, our DAM solutions mitigate time wastage and vastly improve time-to-courts.
