

WINDGUARD SERIES

Midland Garage Door Manufacturing Company has been manufacturing residential garage doors and commercial overhead doors since 1978. To minimize damage from strong winds, Midland conducts Certification Testing Process in compliance with ANSI/DASMA 108 to ensure that doors are certified to meet building codes for 115 mph wind load requirements on most models, and 120 mph for select sizes. For a nominal fee, the doors listed below can be purchased as a Certified WindGuard Series door. Your door will be built using the heavy-duty hardware, struts, etc. required to meet WindGuard wind load requirements. Contact your authorized Midland Garage Door dealer for details.
