visitdays

Embedded Video Streaming Updates

OVERVIEW ⌄

VisitDays' new embedded video streamer will easily allow students to join live sessions without having to open third-party applications like Zoom. Now, attendees can join a live session while simultaneously navigating within the app to find out more information about the session, speakers, and any additional content.

FEATURE UPDATES ⌄

Feature updates include the ability to assign a spotlight speaker, which enhances their video. Hosts can also easily create breakout sessions for their live sessions. The in-app streamer includes improved chat capability and mobile-friendliness.

Speaker Spotlight

Improved Chat

Mobile Friendly

BENEFITS ⌄

1

Native Streaming

Live session attendees no longer have to download a third-party app like Zoom, which can help show-up rates for those who are looking for an easier way to join.

2

User Controls

The hosts and attendees have several controls to make the in-app streaming experience as seamless as possible. Hosts can control attendee volume, create breakout sessions, and designate spotlight speakers.

3

Stage Access

Exhibitors have access to the VisitDays Stage, which promotes the live session in-app, allowing attendees to navigate throughout the session that most interests them.
