

## DID YOU KNOW?

**1 in 5**

Small businesses will suffer a cyber breach this year.

**81%**

of all breaches happen to small and medium-sized businesses.

**97%**

of breaches could have been prevented with today's technology.

## Protect your income and business with these tips!

### SECURITY ASSESSMENT

It's important to establish a baseline and close existing vulnerabilities. When was your last assessment?

### SPAM EMAIL

Secure your email. Most attacks originate in your email. We'll help you choose a service designed to reduce spam and your exposure to attacks on your staff via email.

### PASSWORDS

Apply security policies on your network. E.g. Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts and limit user access.

### WEB GATEWAY SECURITY

Internet security is a race against time. Cloud-based security detects web and email threats as they emerge on the internet, and blocks them on your network within seconds - before they reach the user.

### ADVANCED ENDPOINT SECURITY

Protect your computers and data from malware, viruses, and cyber attacks with advanced endpoint security. The latest technology (which replaces your outdated anti-virus solution) protects against fileless and script-based threats and can even roll back a ransomware attack.

### MULTI-FACTOR AUTHENTICATION

Utilize this on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that, even if your password gets stolen, your data stays protected.

### COMPUTER UPDATES

Keep Microsoft, Adobe, and your other products updated for better security. We provide “critical update” service via automation to protect your computer from the latest known attacks.

### DARK WEB RESEARCH

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your business from stolen credentials that have been posted for sale.

### SIEM/LOG MANAGEMENT

(Security Incident & Event Management) Uses big data engines to review all event and security logs from all covered devices to protect against advanced threats and to meet compliance requirements.

### Encryption

Whenever possible, the goal is to encrypt files at rest, in motion (think email) and especially on mobile devices.

### FIREWALL

Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM.

### MOBILE DEVICE SECURITY

Apply security policies on your network. E.g. Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts and limit user access.

### BACKUP

Backup local, Backup to the Cloud. Have an office backup for each month of the year. Test your backups often.

### SECURITY AWARENESS

Train your users - often! Teach them about data security, email attacks, and your policies and procedures. We offer a web-based training solution and “done-for-you” security policies.

### EXTRA PROTECTION

If all else fails, protect your income and business with cyber damage and recovery insurance policies.
