IAP ■ INNOVATION ACCELERATION PLATFORM

RETHINKING INNOVATION: ACHIEVING YOUR FUTURE TODAY

## ACTING AGILE WHILE USING OLD TECHNOLOGY FAILS

You would probably agree that innovation is usually a good thing. The more, the better. And it is essential to survive in the fast changing and competitive business of the financial industry.

What is limiting innovation?

The reason for insufficient innovation boils down to budget and skills capacity. While these two factors are limited, capacity for innovation can be expanded by increasing efficiency and detaching innovation from scarce skills.

Instead of betting on a single opportunity and creating a single point of failure for your business model, the Incentage IAP enables you to implement multiple opportunities within a shorter time frame, learn early from market feed-back and diversify your business model for a future proof evolution.

With the Incentage IAP you can become explorative and truly business agile.

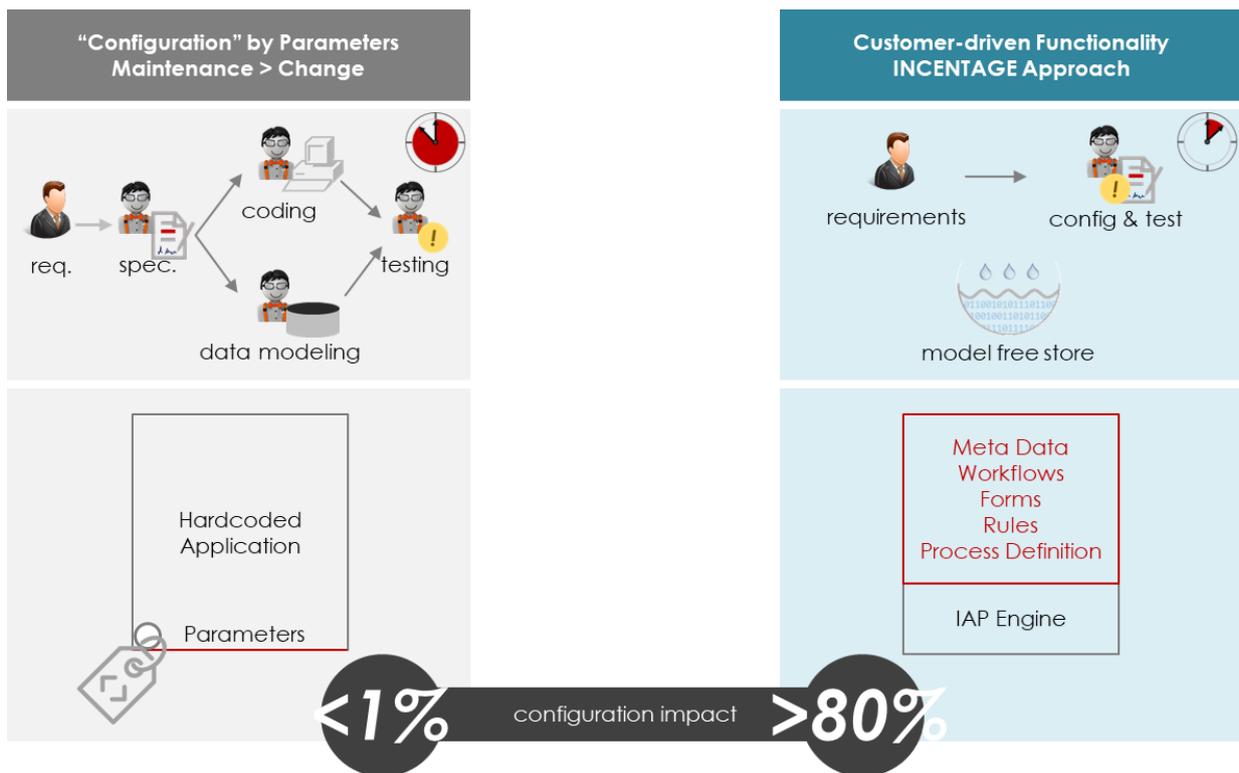

Leave the complicated implementation processes and dependencies behind and accelerate your time-to-market significantly to new levels!

TREAT INNOVATION LIKE A STRATEGIC IMPERATIVE

Too often the speed of IT projects is determined by the availability of development capacity, new releases from vendors, complicated design dependencies such as relational data models with optimisation requirements and last but not least money.

Imagine a world in which you can create your very own transaction processing, workflows and reference data management without a single line of code - without depending on a vendor's release cycle, for less money, faster and better than ever.

IAP links the legacy applications, messaging, APIs and DLTs, integrates functional modules, translates formats, ensures monitoring and provides a

powerful overview and investigation capability. Innovation becomes visible in a company cockpit.

IAP provides a new level of configuration power to engineers that do not need to develop code. IAP ensures bullet proof robustness, rock solid solutions and scalability.

IAP facilitates implementation by leveraging the latest state-of-the-art technologies. Use the power of Elasticsearch without the need to master its complex APIs. Use the flexibility of vue.js without the need to be a developer.

IAP speeds up your project. As an example, a change in your reference data does not require any change in your data model. You can simply use the new data.

IAP lets you structure your innovations into apps which makes it easy to progress in parallel on a large number of innovation streams.

IAP brings you new DevOps with Docker, Kubernetes and hybrid cloud setup.

Our customers are using IAP to digitise and streamline processes. Examples are end-to-end billing automation of services to B2B customers, replacing e-mail notifications (e.g. blacklist hits etc.) with portal collaboration inboxes etc.

Become agile at heart! Try IAP with your use case, learn along the way and replicate. We will help you and enable you to keep ownership of your strategic change-the-business

Your IAP benefits are:

- 1** Eliminates dependency on developer resources
- 2** Eliminates dependency on vendor managed applications
- 3** Accelerates building new solutions
- 4** Increases solution quality
- 5** Business rules management lets you adapt the system behaviour throughout the day
- 6** Built-in scalability lets you grow over time
