GrufeKit Green Roof System

Installation Guide

grufekit®

Welcome

This short guide will explain in a few simple steps how to install the ANS GrufeKit Green Roof System.

We've designed this as a DIY system that comes in kit-form. This means we do the work of planting, establishing and growing the modules so they are delivered to you fully acclimatised and ready to be installed.

If you aren't able to install yourself, we can recommend local installers to help you create your green roof.

If you have any questions please don't hesitate to give us a call on +44 1243 545818.

Step 1: Preperation

1. Ensure your roof is water tight.

2. Prepare the tools you need for the installation:

- Hacksaw
- Pliers
- Handsaw
- Tape measure
- Scissors
- Gloves
- Utility knife

3. Clean the surface and tidy the roof area.

4. Make sure the contents of your GrufeKit delivery is unwrapped and the materials are not left stacked.

Step 2: Protection Fleece

1. **Lay the protection fleece** over the whole roof area. Make sure you allow for an overlap.

2. **Place GrufeTiles in the 4 corners** to hold the fleece in place.

3. **Cut the protection fleece** around any roof lights or other obtrusions.

Step 3: The Green Roof

1. Clip your GrufeTiles over the top of the protection fleece.

2. If you need to cut a tile to fit, you can use a handsaw or a grinder. The cut edge then needs to be placed so it faces into the rest of the green roof, so that it's supported by the next tile.

3. Once all the GrufeTiles are clipped together, **trim the protection fleece.**

4. If you don't have an upstand or parapet, we recommend you use the **GrufeGuard**. Clip your GrufeGuard pieces together around the edges of the roof, using the angled and straight connectors where necessary.

5. If you're using **Scottish pebbles** (as feature edging or required by local regulations), simply lay these out along the borders, using approximately two bags per linear metre.

If you'd prefer to watch a How To video, check this out.

Step 4: Share your success!

Now you've completed your green roof, take some time to enjoy the new green space and share your success on social media:
