

IoT Solutions for Utilities & Waste Management

Ruggedized sensor devices enable remote monitoring and optimization for businesses in Utilities, Waste & Infrastructure

Xtello

Data, at your service

Solutions:

Know actual location of your mobile containers

Use our Tracking Xentrals for last known location of containers and assets. Forward data for further visualization in your preferred application or simply use our map view.

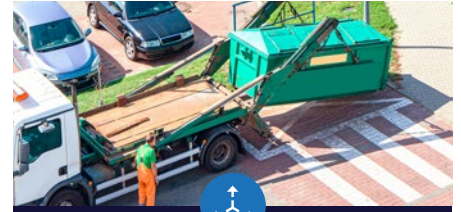

Solution: Tracking Xentral

Monitor water levels remotely

Use the Xtellio Radar Xentral to monitor water levels in sewers, streams or overflow bassins to get notifications of exceeded pre-set thresholds.

Solution: Radar Xentral

Get data on container events

From the Tracking Xentral you can get insights to when and where a container was emptied. This is based on a pre-set angle which, when exceeded, defines a "tip-event".

Solution: Tracking Xentral w. accelerometer

Optimize route planning and customer service

Use the Radar Xentral to know actual fill level in waste containers to ensure optimal emptying route planning. Avoid overflowing waste due to filled containers.

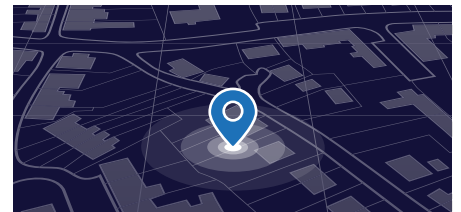

Solution: Radar Xentral

Get data to monitor actual utilities consumption

With our Metering Xentral, you can collect data from your digital utility meters via Wireless M-Bus. Use the data to monitor operations and actual energy and water consumption.

Solution: Metering Xentral

Additional insight

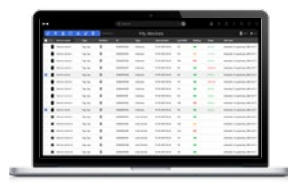

In addition to transmitting data, most of our Xentral devices also send their location, enabling you to create a comprehensive map view of all your devices. Each device delivers a timestamp that allows you to determine the exact time a measurement was taken.

Data, at your service means:

Easy "Plug & Play" onboarding

Easy 'Plug & Play' setup. Deploy in minutes. Activate Xentrals with button press, pair with Xenses via QR code scan. Secure with screws or strips.

Device Management

The Xtellio Device Manager provides a great overview, allowing you to organize and monitor your devices and check their basic health status.

Control your data with Cloud-based APIs

Xtellio's Cloud-based APIs provide you with flexibility and freedom to choose any data visualization or Cloud solution for managing/saving your data.

Subscribe to your needs

Choose the Service subscription tier that best meets your needs for traffic frequency, device configuration possibilities, and data backup services.
