

# IoT Solutions for Construction & Equipment Rental

Ruggedized IoT solutions for machine and asset tracking applications. Remote monitoring of job-site energy consumption, waste container fill levels and much more.

# Xtello

Data, at your service

## Solutions:

### Track your equipment and non powered assets

Attach an Xtellio Tracking Xentral to non-powered equipment and assets to track lost or stolen valuables. Track last known location in a simple map-view function.

Solution: Tracking Xentral

### Track handtools with a wireless beacon

Use a Beacon Xense that connects to a Xentral Gateway device to identify and locate smaller assets on job-sites or in service trucks and use a lost connection status for notifications/alerts.

Solution: Beacon Xenses + Gateway Xentral

### Remote monitoring of container fill levels

With Xtellio Radar Xentral you can be notified when your containers are filled. Use also GPS data for logistic purposes or simply enjoy a mapview displaying all your containers.

Solution: Radar Xentral

### Reduce energy consumption in trailers

Avoid mould and control heating/cooling to achieve savings at your job-site trailers. Xtellio Air Quality Xentral lets you monitor temperature, humidity, pressure and GPS location.

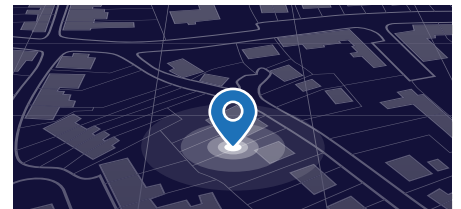

Solution: Air Quality Xentral

### Understand actual power consumption on job-sites

Understand actual energy consumption across the job-site through the Xtellio Metering Xentral which reads wireless M-Bus data from on-site power and water meters.

Solution: Metering Xentral

### Additional insight

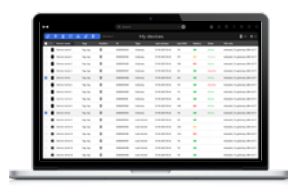

In addition to transmitting data, most of our Xentral devices also send their location, enabling you to create a comprehensive map view of all your devices. Each device delivers a timestamp that allows you to determine the exact time a measurement was taken.

## Data, at your service means:

### Easy "Plug & Play" onboarding

Easy 'Plug & Play' setup. Deploy in minutes. Activate Xentrals with button press, pair with Xenses via QR code scan. Secure with screws or strips.

### Device Management

The Xtellio Device Manager provides a great overview, allowing you to organize and monitor your devices and check their basic health status.

### Control your data with Cloud-based APIs

Xtellio's Cloud-based APIs provide you with flexibility and freedom to choose any data visualization or Cloud solution for managing/saving your data.

### Subscribe to your needs

Choose the Service subscription tier that best meets your needs for traffic frequency, device configuration possibilities, and data backup services.
