

IIoT Solutions for Industry 4.0 / Smart Factory

Monitor energy consumption or parameters that impact product quality and operational downtime in production

Xtellio

Data, at your service

Solutions:

Get data on actual consumption of energy

Focus efforts to lower energy consumption through insights from Wireless M-Bus meters that are collected by our Metering Xentral. Will also ease the documentation of CO₂ footprints.

Solution: Metering Xentral

Monitor ambient production environment

Use our Air Quality Xense or Xentral to stay in control of parameters that might impact product quality and result in downtime and discarded materials.

Solution: Air Quality Xentral
or Air Quality Xenses + Gateway Xentral

Measure temperature in a specific point

Our Thermocouple Xense can measure extreme temperatures at a specific point. The sensor is easy to move around as it sends data wireless.

Solution:
Thermocouple Xense + Gateway Xentral

Machine activity and status monitoring

Connect digital/analogue inputs or RS232 connections to learn more about machine status and run-time e.g. for service planning and remote monitoring.

Solution: Digital I/O Xentral

Discover wear on rotating parts

Avoid production downtime via early warnings from the wireless Accelerometer Xense which can detect vibrations in e.g. rotating machinery.

Solution:
Accelerometer Xense + Gateway Xentral

Additional insight

In addition to transmitting data, most of our Xentral devices also send their location, enabling you to create a comprehensive map view of all your devices. Each device delivers a timestamp that allows you to determine the exact time a measurement was taken.

Data, at your service means:

Easy "Plug & Play" onboarding

Easy 'Plug & Play' setup. Deploy in minutes. Activate Xentrals with button press, pair with Xenses via QR code scan. Secure with screws or strips.

Device Management

The Xtellio Device Manager provides a great overview, allowing you to organize and monitor your devices and check their basic health status.

Control your data with Cloud-based APIs

Xtellio's Cloud-based APIs provide you with flexibility and freedom to choose any data visualization or Cloud solution for managing/saving your data.

Subscribe to your needs

Choose the Service subscription tier that best meets your needs for traffic frequency, device configuration possibilities, and data backup services.
