The Challenge

One of the world's largest pharmaceutical corporations wanted to incorporate environmental sustainability into their overall organizational strategy. Their primary goals were to reduce their impact in three key areas; environment, waste and water for not only their own operations but with suppliers as well. However, they lacked data and insight on how they could measure their ESG (Environmental, Social and Governance) performance.

The Solution

Altimetrik created an efficient KPI structure and platform that allowed the organization to track ESG metrics and guide performance to better address gaps. In addition, a comprehensive and scalable governance model that included auditable procedures was created to help them identify changing trends and evolving regulatory and legal needs.

The Result

Altimetrik's solution allowed the company to align processes, definitions, controls and reporting guidelines with their lofty ESG goals. In addition, they were able to track, approve and communicate necessary changes. They gained valuable intelligence on ways to better manage data, bring disparate systems into better harmony and monitor key metrics. With the development of over 500 ESG related KPIs, Altimetrik's program enabled the organization to adapt to ESG issues faster, while promoting trust among stakeholders while holding them accountable on sustainability goals.
