

COMMERCIAL OFFICE BUILDINGS AVOID WATER DAMAGE WITH AlertAQ™

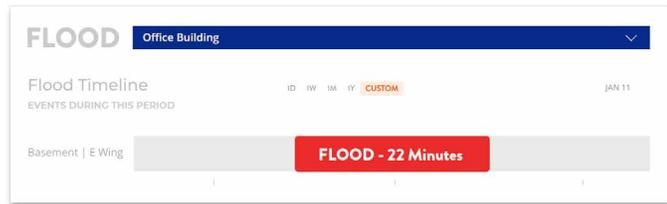

The AlertAQ platform was installed at several commercial office buildings that are part of a property management company's portfolio. AlertAQ sent alerts for a water leak and freezing temperatures which saved two office buildings from significant water damage repair costs, negative occupant experience and business interruptions.

“Because of the phone call from the AlertAQ platform, we were there 30 minutes faster than another property manager who got a phone call from the fire alarm company.

- Associate Property Manager

Water leak phone call

The sprinkler system in the basement of a commercial building suddenly burst leading to partial damage of 850 linear feet of drywall. As soon as the water contacted Alert Labs water leak sensors, the AlertAQ platform made a phone call to the associate property manager.

The early detection alert helped minimize the damage and saved thousands of dollars in repair costs.

Low Temperature Alert

During an extreme cold warning, the property manager on call received a text alert on his phone indicating that near-freezing temperatures were detected in a mechanical room. The property manager discovered that a return air door had been left open after maintenance staff had completed work in the room. A pipe did freeze but the damage was limited to a small area which was easily cleaned up without incurring any repair costs.

“The Alert Labs water intelligence solutions have proven themselves. We’re hyped about rolling them out to more of our properties.”
