

What is Post Merger Integration?

Post Merger Integration is an industry term for merging the various functions of an acquired company into the parent. Easy! Except from a technology standpoint – it isn't. There is a multitude of considerations from custom built platforms to dealing with the choices made when a company grows organically (ie without a technology strategy).

Our Methodology

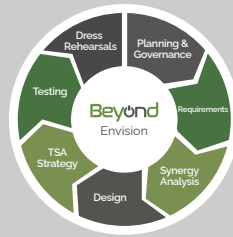

Engage

Encouraging technical staff in the target acquisition to see opportunity during a time of significant change. Making sure teams are engaged accelerates delivery.

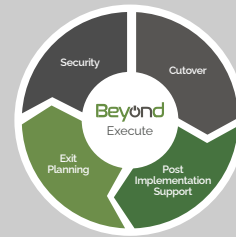

Examine

We undertake detailed technical discovery to ensure that no stone is left unturned. Having knowledge in advance ensures deadlines are met and budgets maintained.

Envision

Our Technical Architects draw up the desired outcome focusing on a simplicity first model. We will never overcomplicate our engagements. Full design documentation is provided to ensure stakeholder buy-in.

Execute

This is where the plan swings into action, using our Project Managers alongside our fully certified technical team, we deliver upon the design, keeping you informed at all times.

Evolve

We understand that your business has been through an extensive period of change. So we provide a hypercare service whereby we look after your targets support whilst your own team comes up to speed. This gives excellent continuity for your acquisition.

Some of our recent integrations:

Integration of key acquisitions legacy technology to Office 365/Intune.

Migration and Integration of acquired businesses into new environment

Multiple acquisitions of various sizes

Discovery and design of future technology state

Integration of various complex acquisitions across Europe
