

BATTLEFIELD ANTI-AIRCRAFT NON-LETHAL (VSHORAD) SYSTEM

LIGHT,
HANDHELD

UP TO
500 SHOTS

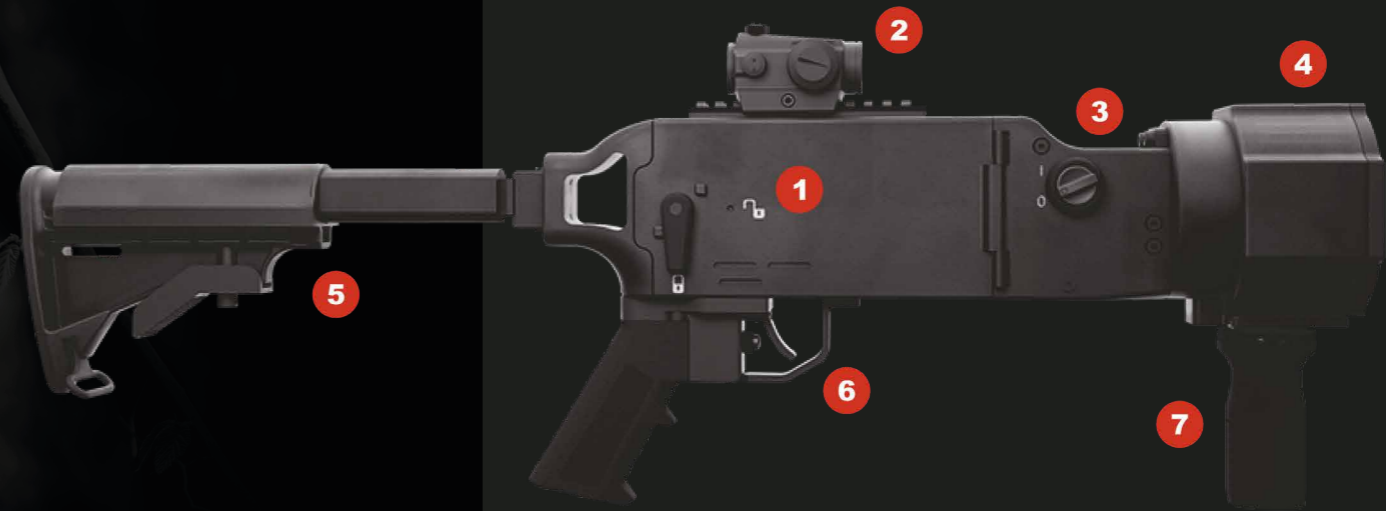

PORTABLE
DESIGN

DUST-
& WATERPROOF

OPERATIONAL
REACH 5 KM

- 1. Battery
- 2. Red dot sight
- 3. ON/OFF switch
- 4. Reflector
- 5. Folding stock
- 6. Trigger
- 7. Front grip

A REAL WAR CHANGER

BANS FEATURES

- Operational reach: up to 5 km
- A light, handheld device, acts as a secondary weapon
- Dust- and waterproof (IP56)
- 500 activations with a dual battery pack
- Maintenance-free

EFFECTIVE ANTI-AIRCRAFT DEFENCE WITHOUT A SINGLE SHOT FIRED

The light shoulder weapon simulates a missile launch pattern that digitally stimulates an aircraft's missile launch warning and detection system and triggers its alarm.

Combat aircraft or helicopter is forced to immediately dispense countermeasures, flares.

Extensive use of flares leaves combat aircrafts vulnerable to anti-aircraft missiles.

Pilots must then either abort their mission or remain under open fire or real anti-aircraft missiles.

- 1** Triggers aircraft's missile launch warning and detection system
- 2** Selection of VSHORAD missile patterns
- 3** Forces decoy of flares
- 4** Significantly increases aircraft hit probability when used in tandem with MANPADS

Guardiaris' spinoff company Carbotech, successfully launched a brand new anti-aircraft warfare philosophy: BANS non-lethal weapon operating in conjunction with VSHORAD systems.
