

A trusted name in highly effective
pool solutions since 1988

Metal Free Winterizer

Available in 1 litre and 5 litres

Some of our clients prefer to use a non-metallic-based algaecide so we introduced METAL FREE Winteriser . It is a polymer-based product.

For best results:

- Adjust your pool water to between 7.2 and 7.6 (7.0 to 7.2 if algae is severe).
- Brush walls and vacuum visible algae to waste (if required).
- Add Chlorine as required or recommended
- Add ALGON'S METAL FREE Winteriser as per dosage on the bottle and apply evenly around the edges of pool with filter running (not via skimmer). Wait 24 hours if pool has been superchlorinated before adding Metal Free Winteriser
- Can be used in ponds at the same dosage. Do not use in ponds or water features with fish.
- If algae persists drop the Ph of your pool water. (7.0 to 7.2)
- Once clear of Algae we recommend for effective control of Algae to maintain your pH level at 7.3
