

A trusted name in highly effective
pool solutions since 1988

Winterizer Algaecide

Available in 1 litre and 5 litres

Our customers asked us to produce a winter algae control. So we modified one of our existing products and created WINTERISER.

WINTERISER has been developed to last up to 4 months and prevents your pool getting algae thus making Summer start-up much easier.

WINTERISER will greatly reduce your chlorine requirements over winter.

WINTERISER contains 40 gm/litre complex blend of copper salts formulated for slow release over the winter months.

- Vacuum your pool then clean filter system thoroughly by back washing.
- Adjust Ph to between 7.2 & 7.6.
- Add chlorine.
- Wait 48 hours before adding ALGON'S WINTERISER at the recommended dosage.
- Throughout winter remember to keep adding chlorine every 7 to 14 days and run filter approx 4 hours a day.
- Don't let the Ph climb above 7.6.
