# Speed Past Care Transition Roadblocks with **Interoperability**

Healthcare providers are told how electronic medical record systems can improve care and cut costs. However, patients aren't just seeing one doctor anymore. **Interoperability supports the exchange of information between providers, helping ensure patients receive the right diagnoses wherever they are.**

Health Networks Are Rapidly Expanding

59%
of healthcare providers reported using an EHR in January 2016.

28.4:
The average number of doctors Americans over the age of 65 see in their lifetime.

Incompatibility Can Cause Medical Errors

**1.5 million**
people are harmed, injured or killed each year by medication errors.

Improve Care, Reduce Costs

$30 billion:
The amount of money interoperable systems can save U.S. healthcare each year.

89%
of healthcare providers believe electronic data exchanges improve quality of care.

THORNBERRY LTD
Interoperability at our core.
