

# PLATFORM SCIENCE DRIVER VEHICLE INSPECTION REPORTING

Simplify Vehicle Inspections with PS DVIR

Our easy-to-use driver vehicle inspection report (DVIR) solution helps drivers keep their vehicles and trailers road-ready with an intuitive interface for recording defects, capturing photos, and documenting maintenance issues.

## SIMPLIFIED INSPECTION REPORTING

Streamline the DVIR process with drop-down items for each inspection category, eliminating the need for drivers to type and making their lives easier.

## BUILT-IN TMS INTEGRATION

Help your drivers save time by automatically inputting basic information, like driver ID, tractor ID, trailer ID, driver name, and odometer information.

## SEAMLESS APP INTEGRATION

Drivers in fleets enrolled in the U.S. Customs Trade Partnership Against Terrorism (CTPAT) can certify they have completed their 17-point CTPAT inspection in the PS DVIR. CTPAT inspection status can also be viewed for past DVIRs and in the portal.

## YOUR WORKFLOW, YOUR WAY

Close the loop on repairs and fixes while maintaining compliance with FMCSA and DOT regulations by automatically storing, retaining, and importing DVIR data—including photos—directly into your maintenance system.

## SAVE TIME & ELIMINATE ERRORS

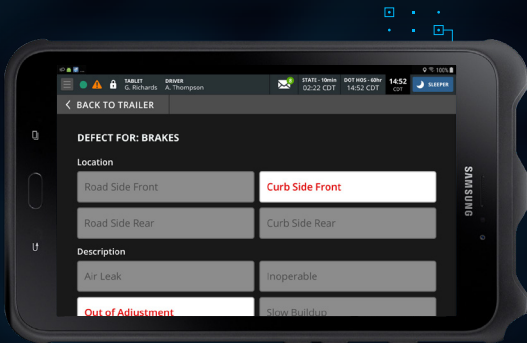

PS DVIR shares real-time inspection report data and history in a portal that shows which trucks are safe and which need repairs while ensuring drivers remain compliant with regulations by completing their DVIRs.

Connect with us to see PS DVIR in action and learn how we help you fleet stay safe and efficient on the road ahead.

## Feature Spotlight

### DEFECT-ONLY FLOW

Drivers can perform defect-only checks instead of clicking into each inspection area. If no defects are found, drivers simply select "no defect," certify and submit.

### THREE-SIGNATURE CAPTURE MAINTENANCE WORKFLOW

Our third signature capture enables drivers to quickly review and sign off on repairs to reported defects and helps you track the maintenance cycle more efficiently.

### RESOLVE DEFECTS FASTER WITH IMAGES CAPTURED FROM THE FIELD

Verify vehicle issues or load defects with photos directly uploaded from your drivers' tablets.
