A-LIST Streamster ™

Scheduled Playback for Internet TV

The **Streamster** is robustly configured with most of the features and functions of the **A-LIST BROADCAST** Automation System used by networks and TV stations around the world, but is dedicated to IP operations. This cost-effective hardware/software combination is the perfect solution for managing and streaming your own Internet TV station, featuring NDI and streaming input and output.

Just **7"** x **7.4"** x **2.75"**, this is the smallest "Master Control" computer you'll ever use. Although tiny, it's a monster when it comes to power and features. It includes the latest generation i9 processor, 16GB of memory, a 256GB NVMe boot drive, a 1TB SSD storage drive, and keyboard mouse and monitor. It runs on Windows 10.

A-LIST Streamster PRO ™

The **Streamster PRO** includes additional capabilities that support a revenue-generation model similar to traditional over-the-air broadcasting. Monetize your content by selling 'time' to anyone wanting to have program and/or advertising presence on your channel.

SDI/HDMI output card • Full Screen and/or MultiZone Display
## SegmentR PRO with FileRx (file segmenting & audio normalization)

PLAYLIST AUTOMATION uses a simple, graphics-oriented drag-and-drop interface that makes list creation and management intuitive and fun.

The unique system design offers unmatched flexibility and simplicity by playing any combination of files and folders ... with automatic looping of specified folder content when tight scheduling is not required.

In addition to streaming, output your signal via **SDI and HDMI** for DTV encoders, cable channel modulators and Program monitoring.

Our unique **PLAYLIST TOOLS** let you create and manage all aspects of your playlist - from Events to Breaks, to multiple types and layers of Overlays.
