VDESK™ Multi-Camera PTZ & PTX Integrated Production Systems

CLASSIC Interface

PRODUCER Interface

TalkingPoints Interface

VDESK Integrated PTZ & PTX Production Systems include switcher, effects, transitions and Chroma key, with local encoding and streaming functions. They include 23" touch screens, support 4, 8 or 12 SDI, HDMI and NDI inputs, a Hall-effect joystick, and control most PTZ cameras including our own high-quality HD and 4K PTZ models. It also controls **RUSHWORKS PTX Universal PanTilt Heads**, and the **RUSHDOLLY Robotic Camera Platform**.

VDESK includes three unique user interfaces that let you work how you want, when you want. Use your iPad, Android or Windows tablet to control your VDESK over a wireless(N) network, and run the entire show from anywhere in the room.

Add the **VDX T-Bar Control Surface** option for even more control and accessibility during production. It includes shortcut keys for many transitions and effects, included Pip and double-box. You can also select cameras and individual presets for completely integrated production control.

TALK-TAKE is our automated video switching intelligence based on active microphone detection – along with a set of user-definable “rules” for emulating the dynamics of an operator. You can control dozens of mikes by linking multiple mixer chassis. The useful feature is included in all VDESK configurations.
