C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

W.W. Grainger, Inc. is a broad line, business-to-business distributor of maintenance, repair, and operating (MRO) supplies and other related products and services. More than 4.5 million customers worldwide rely on Grainger for products in categories such as safety, material handling, and metalworking, along with services like inventory management and technical support. These customers represent a broad collection of industries, including commercial, government, healthcare, and manufacturing and place orders online, on mobile devices, through sales representatives, over the phone, and at local branches. Approximately 5,000 suppliers provide Grainger with more than 1.5 million products stocked in the company's distribution centers (DCs) and branches worldwide. Collectively, Grainger offers more than 2 million MRO products in its High-touch Solutions assortment and more than 30 million products collectively through its expanding Endless Assortment offering. Grainger employs approximately 24,200 team members across the globe. For more information on Grainger, visit invest.grainger.com.

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Board-level committee</td>
<td>General ESG oversight is by the Board Affairs and Nominating Committee (BANC), which is comprised of all independent Directors and, in effect, is a Committee of the Whole. The BANC annually reviews the Company’s ESG strategy, programs, and reporting, including environmental and sustainability, social responsibility to its communities, governance, the Company’s culture, talent strategy, and diversity, equity and inclusion. An example of a climate related decision made by the BANC was to review and approve Grainger's decision to disclose against the Sustainability Accounting Standards Board (SASB) and the Task Force on Climate-related Financial Decisions (TCFD) in 2020 and provided feedback on climate-related disclosures on Form 10-K risk factors. The Board’s Compensation Committee oversees the Company's programs and policies for human capital management and assists the BANC in its oversight of the Company’s programs and policies with respect to employee engagement and leadership effectiveness. In addition to the annual review, the BANC and the Compensation Committee receive routine reports and updates on ESG matters on an as-needed basis. The Board includes one Director with expertise in corporate sustainability and one Director with expertise in environmental matters.</td>
</tr>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>The Company’s ESG efforts are led by the Chairman and CEO who chairs management’s ESG Leadership Council. The key objectives of the ESG Leadership Council include providing strategic direction of the Company’s ESG program, identifying ways to incorporate the appropriate ESG initiatives into operations and strategy, and making regular reports to the BANC and the Compensation Committee, as appropriate. The Company’s ESG strategy as set by the ESG Leadership Council is implemented by two cross-functional groups: (a) the ESG Steering Committee, senior leaders who drive the ESG Leadership Council’s strategic objectives; and (b) the ESG Working Group, subject matter experts who implement day-to-day programs in pursuit of those objectives. Core initiatives relating to culture and talent, including human capital management and diversity, equity and inclusion, are led by the Grainger Human Resources team in coordination with the ESG Leadership Council.</td>
</tr>
</tbody>

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

**ESG Leadership Council:** Each of the positions identified as having the highest management-level with responsibility for climate-related issues — Chief Executive Officer (CEO), SVP & Chief Financial Officer (CFO), SVP & Chief Human Resources Officer (CHRO) and SVP & General (Counsel), VP Merchandising and Supplier Management, VP Network Strategy & Transportation, and Global Lead ESG and DEI (Sr. Director, Diversity & Corporate Responsibility)— constitute Grainger’s ESG Leadership Council. The Company’s ESG efforts are led by the Chairman and CEO who chairs management’s ESG Leadership Council. The ESG Leadership Council meets quarterly to discuss pertinent ESG issues and objectives. In addition to these regular meetings, various representatives from the ESG Leadership Council meet with the BANC annually to review the Company’s promotion of ESG. The BANC also receives routine reports and updates from ESG Leadership Council members and senior management on ESG matters.

**Description of responsibilities:** The key objectives of the ESG Leadership Council include identifying ways to incorporate the appropriate ESG initiatives into operations and strategy, overseeing the overall ESG program, overseeing the ESG materiality assessment, and making regular reports to the BANC and other Board committees. The ESG Leadership Council is supported by a cross-functional steering committee providing subject matter expertise, implementing day-to-day programs and driving progress toward the success of our strategy. Core initiatives relating to culture and talent, including human capital management and diversity, equity and inclusion, are led by the Grainger Human Resources team in coordination with the ESG Leadership Council.

**Titles:** The titles of all members of the ESG Leadership Council members are: Chairman & CEO; SVP & CFO, SVP & CHRO, SVP & General Counsel; VP, Merchandising and Supplier Management; VP, Network Strategy & Transportation; Global Lead ESG and DEI (Sr. Director, Diversity & Corporate Responsibility). Overall ESG Governance: The Company integrates ESG initiatives into its strategy and daily operations at each level of its business. This begins with general ESG oversight by the Board Affairs and Nominating Committee (BANC), which is comprised of all independent Directors. The BANC annually reviews the Company’s ESG programs and reporting, including environmental and sustainability, social responsibility to its communities, governance, the Company’s culture, talent strategy, and diversity, equity and inclusion. In turn, the Compensation Committee oversees the Company’s programs and policies for human capital management and assists the BANC in its oversight of the Company’s programs and policies with respect to employee engagement and leadership effectiveness. The Board includes one Director with expertise in corporate sustainability and one Director with expertise in environmental matters.

C1.3

C2.1b
(C2.1b) How does your organization define substantive financial or strategic impact on your business?

Enterprise Risk Management Framework:

Grainger’s Enterprise Risk Management (ERM) team facilitates the use of the Company’s Enterprise Risk Management Framework (RMF) to define, measure, and monitor risk across the organization, including climate-related risks. The RMF establishes a common language and methodology to measure and prioritize risks and opportunities and define a process for monitoring of risk treatments. As part of this framework, there is an enterprise risk rating scale that provides guidelines for risk scoring/magnitude. The risk rating scale quantifies risk magnitude through consideration of Impact and Likelihood ratings. Applying ratings to each risk helps to commonly measure and prioritize them in a consistent matter.

In this process, the definition of substantive strategic/financial impact includes a risk that is assigned the following combinations of Impact and Likelihood ratings, with definitions and details of the ratings outlined below:

- 3 Impact rating & 5 Likelihood rating
- 4 Impact rating & 4 or above Likelihood rating
- 5 Impacting rating & 3 or above Likelihood rating

The Impact Ratings measure risk on a 1 (Incidental) to 5 (Severe) scale across four categories: Financial, Customer Experience, Team Member and Compliance. The Financial risk rating scale is aligned with the Company’s financial reporting materiality thresholds.

3 – Moderate - An event causing some disruption in production operations and/or having moderate impact on the ability to achieve business objectives

4 – Major - An event causing considerable disruptions in operations and/or causing substantial hardship and damage to the organization and members characterized by disruptions in critical services that result in the inability to meet service level commitments having a major impact on our ability to achieve business objectives.

5 – Severe - An event causing serious and extended disruptions in operations and/or causing severe hardship and damage to the organization and members, which may be characterized by the failure of critical services or prolonged disruptions, insufficient financial resources, or failure to operate in accordance with laws and regulations and has an extreme impact on our ability to achieve business objectives.

The Likelihood Ratings measures and reasonably predicts the probability of a specific event occurring on a 1 (Frequent) to 5 (Rare) scale. Scores are reported on the same 1-5 scale as the Impact Ratings.

Description of process
Overview: Grainger’s Enterprise Risk Management (ERM) team uses the Company’s Enterprise Risk Management Framework (RMF) to define, measure, and monitor risk across the organization, including climate-related risks. The Board has overall responsibility for risk oversight, with the Audit Committee assisting the Board in performing this function. The Board’s role is to oversee the Company’s ERM programs, including risk assessment and risk management processes and policies. The Audit Committee regularly reviews Grainger’s risk assessment and management processes and policies, including receiving regular reports from the Company’s Chief Information Security Officer.

Identification: Grainger uses external benchmarking to determine applicable short-term, medium-term, and long-term risks for the organization. Either once a risk is identified, or at least once every two years, the ERM team polls the Grainger Leadership Team and the Board to determine the organization’s top 8 risks from a list of risks applicable to the Grainger organization.

Assessment: Each identified top 8 risk has a Grainger executive leadership team member (direct CEO report) owner who is responsible for understanding the risk for the company, designing programs / objectives and mitigation strategies for those risks. Internal Audit does a periodic review/deep dive on select risks annually and provides an assessment to the applicable owner. The deep dives are a joint product between the identified risk owner (GLT member and appointed team members) and our ERM team. Each deep dive assessment includes a review of the risks, risk management activities, opportunities and metrics used to measure the current state of each area, along with sensitivity analysis to show financial magnitude when it can be estimated. Updates and deep dives on the top 8 identified risks occur throughout the year. Additionally, quarterly updates are provided by the Enterprise Risk Management team to the Board through a metrics dashboard that assess and monitors performance of Grainger's top enterprise risks.

Response to risk: Grainger executive leadership team members are assigned a top 8 risk and are responsible for designing programs, objectives, and mitigation strategies for those risks, which are presented to the Board. The Board has overall responsibility for risk oversight, with the Audit Committee assisting the Board in performing this function. The Board’s role is to oversee the Company’s ERM programs, including risk assessment and risk management processes and policies. The Audit Committee regularly reviews Grainger’s risk assessment and management processes and policies, including receiving regular reports from the Company’s Chief Information Security Officer, and members of Grainger’s management who are responsible for the effectiveness of Grainger’s ERM programs. As part of its oversight responsibility, the Compensation Committee then assesses the relationship between potential risk created by Grainger's compensation programs and their impact on long-term shareholder value.
C2.2a Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance to inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Current regulatory risks identified by Corporate Real Estate &amp; Facilities in collaboration with other business departments as relevant. Include those that support (or oppose) renewable energy, such as federal and state incentive programs or solar taxes, since the change in solar incentives due to regulation is a key component of our renewable energy strategy and GHG reduction targets. Investments are prioritized based on our findings and a decision may be made to move forward or not if the investment helps our organization achieve business and climate goals or not. For example, Solar Energy Industries Association reports that, “There is a federal investment tax credit (ITC) for solar energy systems in place until December 31st, 2023. Our organization considers both the investment viability in addition to carbon reduction to prioritize initiative. The Corporate Real Estate &amp; Facilities Team has built a viability scale for sustainability initiatives based on our Internal Rate Return (IRR). As federal and state incentives decline the investment viability is impacted, and lead to de-prioritization.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Legislative developments concerning new or more stringent environmental laws designed to address climate change such as stricter limits on greenhouse gas emissions or more prescriptive reporting of environmental, social and governance metrics are routinely monitored. Such legislation has the potential for impacting Grainger’s suppliers, product offering, operations, facilities and/or customers. Since there currently is a lack of consistent climate change legislation and standards, Grainger’s compliance approach is tailored to the particular event or matter sought to be addressed by the law and/or standard. Emerging regulatory risks identified by Corporate Real Estate &amp; Facilities and Legal departments, in collaboration with other business departments as relevant, include those that would impact the price of materials utilized in the manufacturing process of goods purchased &amp;/or sold, such as international trade tariffs on imported photovoltaic cells, as another key component of our renewable energy strategy and GHG reduction targets. Vetting these risks allows for the development of mitigation strategies should legislation pass.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>New technologies in terms of relevance in supporting our GHG reduction goals are consistently evaluated within Corporate Real Estate &amp; Facilities, and in collaboration with other business departments as relevant. For example, low-cost buildings controls have, in the past, been too costly to implement, however, newer applications have contributed to Grainger’s emissions reduction efforts. At times newly implemented technologies can impose unintended consequences to the building operations. Risk of component failure in advance systems can impact part or all of operations due to issues such as power quality, harmonics, increased humidification or condensation. Once implemented, some are assessed within the context of latest industry technological advancements and reported on back to leadership monthly.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Potential risks to Grainger’s Environmentally Preferable Products (EPP) are assessed routinely at Grainger from an interdisciplinary group led by Merchandising and Supplier Management. This is a growing segment of Grainger’s business which represented $875 million in sales in 2021 and can contribute to GHG reductions in Scope 3 product use phase. Grainger reviews the specific EPP attributes as new sustainable products are introduced to the product portfolio, and all values are assessed for relevancy. annually. All EPP product claims are evaluated with an external partner, UL LLC, based on the Federal Trade Commission’s Guidelines for the Use of Environmental Marketing Claims (“Green Guides”). To guide customers toward more environmentally preferable solutions, each product in Grainger’s EPP portfolio is identified on Grainger.com with a specific set of certificates, or attributes that are found in the specific technical specifications section for each product. These products are grouped together in a Green filter on the left-hand navigation bar of Grainger.com. EPP products fall into two categories - those that are certified by independent organizations and those that have “green environmental attributes”. A certification acts as a stamp of approval and indicates that a product has met certain environmental standards. These are designated with a green leaf icon on Grainger.com and explained in the compliance section for each product.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Based on market assessments, Grainger has determined that a robust, environmentally preferred product portfolio is critical for meeting key customer needs. Providing environmentally preferable products is embedded in our strategy to provide solutions that keep our customer’s operations running sustainably, which enables Grainger to serve as a trusted advisor, particularly as it relates to helping achieve their sustainability goals. Merchandising and Supplier Management works collaboratively with business units across Grainger to create a more sustainable workplace for our customers and our communities through our Environmentally Preferable Product (EPP) Portfolio, a key component of a growing sales segment for Grainger and potential to reduce our Scope 3 emissions. In 2021, the EPP Portfolio featured 100,000 items that help customers maintain sustainable facilities. Annual sales were $875 million, a 23% increase over 2020. We offer our customers a broad assortment of EPP products, to help customers select product that are third-party reviewed by UL LLC and are either certified or offer specific environmental features to reduce energy consumption, conserve water, reduce waste and improve indoor air quality. For climate change, examples of independently tested certifications include: Carbonfree® Certified, EnergyStar®, EnergyAware®, DLC® Certified, as approved, as well as verified Environmental Product Declarations (EPDs). In addition, customers may request reports to help them track, report and grow their green spend. Similarly, we equip our customer-facing team members with training, sales tools and marketing support so that they can help customers achieve meaningful progress towards their sustainability goals and initiatives.</td>
</tr>
<tr>
<td>Reputational</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Grainger’s continued success is substantially dependent on positive perceptions of Grainger’s reputation. Grainger assesses reputation considerations through its ESG Governance structure and the ESG Leadership Council and ESG Steering Committee, which includes representatives from Corporate Real Estate &amp; Facilities, Merchandising and Supplier Management, Human Resources, Risk Management, Offer Enablement, Finance, Global Ethics and Compliance, Legal, External Affairs and Community Engagement. Climate-related risks such as natural disasters and extreme weather could have an adverse impact on our supply chain, including difficulty in obtaining products from suppliers or in shipping products to customers, thereby potentially impacting our reputation. That said, Grainger’s commitments to sustainability and customer relationships ensure that we continue to enhance our reputation by providing environmentally preferable products and third-party provided sustainability services that enable our customers to address their own climate risks. Grainger is a leader in the MIPR standards. We were the first to set public targets such as a GHG reduction goal, first to build LEED certified facilities, first to become a EPA SmartWay Transport Partner.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>An example of an identified acute physical risk would be disruptions in Grainger’s supply chain, due to the increased severity of extreme weather, which could result in an adverse impact on results of operations. In 2019, Internal Audit partnered with the Supply Chain leadership team to facilitate a deep dive into supply chain risks, risk management activities and opportunities. A disruption within Grainger’s logistics or supply chain network, including damage, destruction, extreme weather and other events, which could cause one or more of Grainger’s distribution centers to become non-functional, could adversely affect Grainger’s ability to obtain or deliver inventory in a timely manner, impair Grainger’s ability to meet customer demand for products and result in lost sales or damage to Grainger’s reputation. Grainger’s ability to provide same-day shipping and next-day delivery is an integral component of Grainger’s business strategy and any such disruption could adversely impact results of operations.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>Chronic physical risks are identified by Corporate Real Estate &amp; Facilities, in collaboration with other business departments as relevant. Long term shifts in climate patterns have the potential to impact Grainger, either through increased frequency and severity of extreme weather events, disrupting global supply chains and logistics impacting Grainger’s revenue, or through changing temperatures, putting strain on our workforces and supply chains, increasing operational costs in our distribution centers and branches through additional air conditioning requirements. Grainger has implemented multiple projects to analyze and mitigate risk arising from long term shifts in climate patterns, such as heat waves induced by increasing average temperatures.</td>
</tr>

<Not Applicable>
Company-specific description

Inability to provide customers the products they want when they want them could significantly impact our results. Grainger’s ability to provide same-day shipping and next-day delivery is an integral component of Grainger's business strategy and any such disruption could adversely impact results of operations and financial performance. Examples include severe weather, natural disasters, and other catastrophic events related to climate change. Due to this risk, Grainger conducts Business Impact assessments to analyze risks and quantify major exposures to Grainger distribution centers within its supply chain, with the particular goal of quantifying the risk of a large-scale DC outage. It is typically updated on a three- to four-year cycle. The latest Business Impact (BI) analysis occurred in 2019. This analysis is reflective of ten in-scope distribution centers in nine states across the West, Midwest, South and Northeast. The outcomes include prioritization of key facilities or processes by quantifying the significant impact of exposures facing the organization against specific threats. Specifically, identified high-risk DCs as it relates to severe weather and climate change for Grainger currently include Patterson, CA and Mira Loma, CA, as the state of California is more prone to prolonged droughts and extensive wildfires that can impact Grainger’s ability to do business. Additionally, there have been no serious outages across the DC network during periods of extreme weather over the past few years which include: Hurricane Ida in the Southeast, the Dixie Fire in California, the Winter Storm Uri in Texas. However, wildfires in CA have caused air quality issues to our SFDC which forced closure for a day several years ago.

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
80000000

Potential financial impact figure – maximum (currency)
710000000

Explanation of financial impact figure
In 2019, Grainger conducted a Business Impact Analysis in which the business interruption exposure from a major disruptive event causing complete loss of a DC was calculated for each of the 10 major US distribution centers. The methodology of the analysis assumed a major event destroys any one of the ten DCs within the scope of the analysis in which the facility and inventory are destroyed completely. Annual Business Impact value was calculated using the following formula: BI Value = Net Sales - Variable Expenses. Consolidated BI value for the US DCs was calculated using FY 2018 actuals. BI Value for each DC was based on the individual DC's sales activity. Expense variability was factored into the methodology as well. BI Value was allocated to the ten DCs based on 2018 revenue, using a weighted average approach. Total exposure, on top of Business Impact exposure, included property damage estimates.

A range estimate is given because the full financial impact from loss of a DC is dependent on the specific DC lost, as the DCs have varying sales activity, and thus business impact, and also would have varying property damage cost estimates. Given this methodology, the complete loss of one of Grainger's distribution centers could cost the business anywhere between 80M and 710M. This estimated range assumes total loss and includes estimates for mitigation efforts (e.g., rerouting products, drop-shipping, team member overtime, etc.) and rebuild, as well as corresponding financial impacts due to the assumed loss of sales and loss of inventory. While the assessment was completed in 2019, Grainger believes estimates included here have not changed materially. Because the figures here represent estimates, Grainger cannot guarantee the stated range of financial impact would be realized if this loss scenario were to occur.

Cost of response to risk
255000000

Description of response and explanation of cost calculation
Situation & Task: Any disruption that could cause one or more of Grainger’s DCs or branches to become non-operational could adversely impact results of operations and financial performance. Grainger must understand the overall impact and design programs / objectives and mitigation strategies.

Action: To mitigate and manage this risk, continuous engagement with risk management and external consultants occurs to ensure structures and operations are sound. Dynamic models have been developed to re-route orders should one or multiple portions of our operations be affected. Grainger’s business continuity and disaster recovery (BCDR) planning helps minimize the impact of outages affecting Grainger customers. BCDR efforts include developing, implementing and enhancing business continuity processes in alignment with the ISO/IEC 22301 framework for Grainger’s Business Continuity Management Programs (BCMPs). This standard provides the strategic direction for BCMPs and guides the establishment of activities aligned with the framework. BCMPs include a Business Impact Analysis, Risk Assessment, and other mitigation methods and tools. DCs invest in business continuity actions such as generators, satellite / cellular LAN backup, and air scrubbers. Timescale of implementation of mitigation strategies includes ongoing, long-term efforts. Specific supply chain deep-dives and mitigation strategy reviews are conducted annually. The Business Impact Analysis is refreshed every ~3 years. Short-term mitigation includes shifting order volume to other DCs, with majority of volume able to reach 2 or more DCs within 2 days. The Louisville DC, which came online in January 2020, is expected to add material contingency to the network.

Results: While no serious DC outages have occurred during periods of extreme weather, Grainger has developed a risk mitigation plan and scenario analysis. Through this assessment and Grainger’s maintenance of geographic and inventory redundancy, Grainger has determined that it should be able mitigate a large portion of its gross business interruption exposure by shifting volume to other DCs.

Cost: The cost of management for this risk is related to the cost of maintaining and improving Grainger Properties and other critical assets to ensure resiliency against extreme weather events. In 2021, Grainger spent approximately $255,000,000 in capital expenditures related to distribution networks, inventory management, and technology enhancements.

(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?

Yes
(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.

**Identifier**

Opp1

**Where in the value chain does the opportunity occur?**

Direct operations

**Opportunity type**

Products and services

**Primary climate-related opportunity driver**

Development and/or expansion of low emission goods and services

**Primary potential financial impact**

Increased revenues resulting from increased demand for products and services

**Company-specific description**

As emerging environmental product standards take effect, new, more sustainable products and services are available to the marketplace through Grainger’s product assortment. This could lead to an increased demand for products that help customers meet their sustainable purchasing considerations. One example is in the lighting category for energy efficient light bulbs and fixtures. Since 2014, we have engaged with key suppliers to understand how existing and new products can help to reduce greenhouse gas emissions during product use, manufacturing, and/or end of life product disposal declarations. Another example is in our paint categories where we see the strongest demand from a sales perspective for products that contain low VOC (volatile organic compounds) and expect continued customer demand for this product type.

We expect to continue this engagement long-term to assist customers with sustainable purchases as new technologies emerge such as Clean Capture and Sequestration (CCS), research to understand customer and industry considerations for products that assist with decarbonization, or leverage raw materials derived through CCS. The Environmentally Preferable Products (EPP) feature independently tested product certifications such as Carbonfree® Certified, EnergyStar®, EnergyAware®, DLC® Approved, as well as verified Environmental Product Declarations (EPDs) to assist in understanding the emissions of greenhouse gases of a product from a life cycle perspective. Most recently, the following certifications were added to the EPP program to continue expanding options for greenhouse gas reducing products certified by the Carbon Trust®. Examples include: Carbon Trust Carbon Neutral Certification, Carbon Trust Footprint Label, Carbon Trust Standard for Carbon and Carbon Trust Standard for Supply Chain for end-to-end sustainable product considerations. This will assist in broadening the scope of available sustainable products in our offering to customers.

In 2021, EPP sales totaled $875 million, a 23% increase from 2020.

**Time horizon**

Long-term

**Likelihood**

Very likely

**Magnitude of impact**

Medium

**Are you able to provide a potential financial impact figure?**

Yes, an estimated range

**Potential financial impact figure (currency)**

<Not Applicable>

**Potential financial impact figure – minimum (currency)**

26250000

**Potential financial impact figure – maximum (currency)**

122500000

**Explanation of financial impact figure**

Grainger’s dedication to managing and verifying products with green or sustainable certifications and attributes allows our customers to make an informed choice when selecting products. As our capabilities become more sophisticated there is a potential for increased revenue from customer segments including manufacturing, government and healthcare. To estimate the maximum potential impact figure, we aligned with Grainger’s 2022 full year guidance at 14% as economic trends improve, and applied this to last year’s Environmentally Preferable Product (EPP) portfolio sales of $875 million because we anticipate customers will sustain this growth rate as they continue to resume non-pandemic purchasing. In order to estimate the minimum potential impact figure, we took a conservative approach and multiplied EPP sales by the rate of sales growth at 3% to measure by the lower sales growth rate in 2020 due to the pandemic.

**Cost to realize opportunity**

28156

**Strategy to realize opportunity and explanation of cost calculation**

**Situation & Task:** As demand for sustainable products increases, Grainger wants to evaluate our portfolio to meet customer needs and to progress with current standards. Direct feedback is vital to understand customer demand and keeps our portfolio focused on customer needs.

**Action:** We use voice of customer driven portfolio reviews and engage with third parties to evaluate our environmental impact and review green product information. Based on customer feedback, our Merchandising and Supplier Management department conducts in-depth reviews of our portfolio to determine what to offer in our assortment, as well as how to display it on our website and catalog.

**Result:** For lighting products, the team used voice of customer; feedback submitted through our website or our Technical Product Support team paired with market trends. For example, customers indicate goals of making their facilities more sustainable through efficient lighting. The Grainger team captures Environmentally Preferable Product (EPP) certifications and information (e.g., EnergyStar®, DLC® Approved), and displays it to help customers confidently manage their energy and greenhouse gas emissions.

**Cost:** Grainger will continue to engage customers to help drive our portfolio to meet their needs. We also engage third parties to learn how products we offer impact the environment and how we can capture green product information. We have engaged EcoAct to understand the carbon footprint of products we sell from distribution through end-of-life. This work helps us prioritize resource alignment to improve our EPP portfolio. We also engage UL LLC quarterly to review sustainable certifications and attributes. We know this data assists customers to confidently choose green products and using UL helps Grainger offer products that our customers need. We estimate the
costs to manage this is $28,156 (between EcoAct and UL fees). The cost is to support our EPP portfolio to maintain and audit existing products, evaluate products & consult regarding green certifications. We will continue these approaches for other categories and will engage third parties to evaluate product impacts to the environment and offering of sustainable certifications. There is a continued increase in our EPP sales; 2021 totaled $875 million, a 23% increase from 2020. These efforts have shown a demonstrated impact to our EPP revenue.

Opportunity for all use phase categories

C3. Business Strategy

C3.1

(C3.1) Does your organization’s strategy include a transition plan that aligns with a 1.5°C world?

Row 1

Transition plan
No, our strategy has been influenced by climate-related risks and opportunities, but we do not plan to develop a transition plan within two years

Publicly available transition plan
<Not Applicable>

Mechanism by which feedback is collected from shareholders on your transition plan
<Not Applicable>

Description of feedback mechanism
<Not Applicable>

Frequency of feedback collection
<Not Applicable>

Attach any relevant documents which detail your transition plan (optional)
<Not Applicable>

Explain why your organization does not have a transition plan that aligns with a 1.5°C world and any plans to develop one in the future
Our current target for Scope 1 and 2 is based off of a 2°C scenario and is science-based, meaning that we follow the guidelines set forth by the Science Based Targets Initiative (SBTi) and the Greenhouse Gas Protocol, ensuring that our internal actions align with the goal of limiting warming to well below 2 degrees. However, we do not currently have a 1.5°C transition plan as defined by SBTi that includes scope 1, 2 and 3.

Instead, our current climate target, set in 2020, is to reduce our absolute scope 1 and scope 2 emissions by 30 percent by 2030, using a 2018 baseline. This target follows the medium-term goals of the Paris Climate Agreement and we are excited to work toward achieving our new GHG target. The Intergovernmental Panel on Climate Change (IPCC) has confirmed that in order to limit global warming to 1.5°C, the world needs to halve CO2 emissions by around 2030 and reach net-zero CO2 emissions by no later than 2050. In light of these longer-term goals, we also recognize the need to reduce scope 3 emissions as part of our overall emissions reduction strategy. Scope 3 considers all indirect emissions (not included in scope 2) that occur upstream and downstream from Grainger's operations. The majority of our scope 3 impact resides in product use phase, or the energy required to operate the products Grainger sells, such as the electricity required to run an industrial air conditioner or recharge the battery of a cordless drill over its lifetime. Our first step to setting a scope 3 target will be to functionally model and develop reporting and accounting for product use phase. Grainger is also actively pursuing scope 3 emissions improvement through engagement with our suppliers and customers to collectively progress on sustainability and emission goals. However, we also believe there is opportunity to better define scope 3 target setting requirements for the distribution industry. We will be looking to partner with grading organizations to find a path forward for companies in this industry using our expertise. We look forward to being part of the solution and adding more clarity to this emerging topic.

Explain why climate-related risks and opportunities have not influenced your strategy

<tbody>
<tr>
<td>Transition and IEA B2DS scenarios</td>
<td>Company-wide</td>
<td>To enable Grainger to build a strategic approach to evaluate accredited Science Based Targets alignment, we utilized our Marginal Abatement Cost Curve (MACC). This tool provided a visual aid to compare cost and emission impacts associated with various investment options. A MACC presents the extra (or ‘marginal’) costs and carbon reduction (or ‘abatement’) potential of these options relative to a business as usual (BAU) baseline. Grainger has used this quantitative scenario analysis to assess the required emissions reductions from Grainger’s own operations and value chain to align with the latest scientific consensus and using the SBTi as a guideline. Grainger has used climate scenario IEA B2DS to quantify the emissions reduction required to align with a well-below 2.0 Degrees Celsius emissions reduction trajectory and a 1.5 Degrees Celsius emissions reduction trajectory, respectively. 100% of Grainger’s operations have been included within the assessment; to ensure all significant areas of GHG emissions are included. The results of the analysis show that Grainger is required to reduce absolute GHG emissions by 30% to align to a well-below 2.0 Degrees Celsius emission reduction trajectory, and 51% to align with a 1.5 Degrees Celsius emission reduction trajectory. To maintain progress, we have implemented a medium-term target that aligns with CDP’s Leadership criteria and addresses 100% of our Scope 1 and 2 emissions. We consider these targets to be science-based as SBTi states that per IPCC AR5 RCP 2.6, the minimum reduction required is 30% absolute emissions reduction by 2030. This translates to a linear 2.5% reduction (based on 2018) per year on average. Grainger has taken strategic steps toward benchmarking our buildings’ operations against industry standard to ensure we are investing in the most impactful initiatives to reduce our total carbon emissions (facility lighting retrofits, and HVAC equipment heat load studies to right-size our building loads). For scope 3 emissions, Grainger is actively pursuing improvement through engagement with our suppliers and customers to collectively progress on sustainability and emission goals. We continue to investigate processes to functionally model and develop reporting and accounting for the scope 3 category of product use phase. For example, we are evaluating how an increase in sales of specific Energy Star products might support a scope 3 emissions reduction that would align with SBTi scope 3 criteria.</td>
</tr>
<tr>
<td>Physical climate scenarios RCP 2:6</td>

</tr>
</tbody>
</table>

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions
1. How much (%) will Grainger need to reduce Scope 1 and Scope 2 emissions in the established time horizon for each trajectory?
2. Additionally, what is the annual linear percentage reduction for each trajectory?
3. What are the impacts of solar installations to these reduction trajectories and the associated benefits?

Results of the climate-related scenario analysis with respect to the focal questions
The results of the analysis show that Grainger is required to reduce absolute GHG emissions by 30% to align to a well-below 2.0 Degrees Celsius emission reduction trajectory, and 51% to align with a 1.5 Degrees Celsius emission reduction trajectory. These targets have informed our decision to evaluate accredited Science Based Targets alignment. Using our MACC and carbon analytics tool, this target will be directly linked to our business strategy and support other initiatives such as solar generation. To maintain progress, we have implemented medium-term targets that align with CDP’s Leadership criteria and address 100% of our Scope 1 and 2 emissions. We consider these combined targets to be science-based as SBTi states that per IPCC AR5 RCP 2.6, the minimum reduction required is 30% absolute emissions reduction by 2030. This translates to a linear 2.5% reduction (from a 2018 base year) per year on average. Grainger has taken strategic steps toward benchmarking our buildings’ operations against industry standard to ensure we are investing in the most impactful initiatives to reduce our total carbon emissions (facility lighting retrofits, and HVAC equipment heat load studies to right-size our building loads). For scope 3 emissions, Grainger is actively pursuing improvement through engagement with our suppliers and customers to collectively progress on sustainability and emission goals. We continue to investigate processes to functionally model and develop reporting and accounting for the scope 3 category of product use phase. One case study from Grainger’s analysis was evaluating the impact of solar panel system generating electricity in our network. With three systems in place at two sites, Grainger investigated the effects of installing more systems. Grainger found that not only do more solar panels offer the primary environmental and economic benefits, but there are secondary benefits as well. This includes increased energy independence from the energy grid, and that in turn improves Grainger’s business continuity by minimizing the impact of utility grid disruptions.

**Products and services**

As emerging environmental standards take effect, new, more sustainable products and services are available to the marketplace through Grainger’s product assortment. This could lead to an increased demand for products that help customers meet their sustainable purchasing considerations particularly as new sustainability certifications, GHG transparency information, and carbon reduction manufacturing gain in prominence and availability. We engage with key suppliers as partners to understand how existing and new products can help to reduce greenhouse gas emissions during product use, manufacturing, and/or end of life product disposal declarations. As new technologies emerge such as Carbon Capture and Sequestration (CCS), we research to understand customer and industry considerations for products that assist with decarbonization, or leverage raw materials derived through CCS. Each year, we review the Environmentally Preferable Products (EPP) portfolio specific to independently tested product certifications related to climate change such as CarbonNeutral® Certified, EnergyStar®, EnergyAware®, DLC® Approved, as well as verified Environmental Product Declarations (EPDs) to assist in understanding the emissions of greenhouse gases of a product from a lifecycle perspective. Most recently, the following certifications were added to the EPP program to continue expanding options for greenhouse gas reducing products certified by the Carbon Trust. Examples include: Carbon Trust Carbon Neutral Certification, Carbon Trust Footprint Label, Carbon Trust Standard for Carbon and Carbon Trust Standard for Supply Chain for end-to-end sustainable product considerations. In 2021, EPP sales totaled $875 million, a 23% increase from 2020.

**Supply chain and/or value chain**

In addition to a science-aligned scope 1 and 2 emissions reduction target, we must consider Grainger’s impact across its value chain, including scope 3 emissions, the largest area of impact. This is a complex impact to measure. Currently, there are very few organizations setting scope 3 targets even among the most progressive organizations. Still, Grainger has continued to build on its supplier engagement program to understand how we might scope this request in the future. In 2019, the Merchandising and Supplier Management team established Grainger’s Supplier Engagement Program to proactively engage with the suppliers who are the most impactful to our business. This long-term supplier engagement strategy is not time bound.

We seek to partner with key strategic suppliers of sustainable products and solutions through quarterly meetings and invite suppliers to showcase their products at Grainger’s North American Sales and Service Meeting. During this event, we bring our top performing suppliers together for a recognition event, Partners in Performance. This annual event also educates and informs the supplier community about Grainger’s key initiatives and strategy. Reflecting 2021 performance, Grainger continued our recognition program with a Sustainable Supplier Award. Key performance factors included sales of Environmentally Preferable Products (EPP) that manage energy and/or contribute to lower, or more transparency in greenhouse gas emissions. Additionally, we considered their own environmental stewardship as a responsible business across environment, people and governance. While quantitative measures are factored into top supplier awards, key measures of success for this annual event are qualitative as we recognize partnerships with strategic suppliers at an exclusive event with top leaders. Impact of engagement, including measures of success: In order to build Grainger’s Supplier Engagement Program since 2019, a group of suppliers were asked to participate in some focus groups where we shared information about supplier management and other key areas within the organization. Based on the feedback from those focus groups, we decided to communicate more proactively with our key suppliers via quarterly calls and proactive feedback channels and are continuing this cadence in 2021.

**Investment in R&D**

Grainger continues to make climate-related R&D investments. For example, sustainability products and services are one of many areas Grainger is pursuing to help better serve our customer needs. In 2021, in order to help benchmark and standardize opportunities across our network, we conducted lighting audits across our supply chain and corporate network.

We discovered commonalities among energy loads, batteries, HVAC systems, lighting, conveyor systems and air compressors, to name a few. All of these areas offered strategic opportunities for long-term efficiency gains as we implemented energy reduction projects from the findings of these audits.

Additionally, we found it to be very effective to invest in comprehensive building management systems in key locations with great return on investment timeframes. By monitoring our buildings via these systems, we are able to identify and trend global warming risks as they occur and adjust our investment and operation strategies accordingly.

Operations

As a distributor of millions of products, we recognize our duty to ensure our supply chain operates responsibly and sustainably. Grainger has invested significantly in minimizing packaging through “ship complete.” Grainger’s DCs are dedicated to reducing packaging and freight usage. In a process called “ship complete,” we strive to ship all items in the fewest number of cartons, on the same day, from the same shipping point. In doing so, Grainger can maintain a lower usage of corrugate and produce fewer transportation emissions. This results in resource savings that our customers value as much as we do. We also measure our carton-to-order ratio by tracking the number of boxes we ship compared to the number of orders we receive. We continue to monitor this ratio in order to drive improvement and efficiencies in packaging and corrugate use.

Is this a science-based target?
No, and we do not anticipate setting one in the next 2 years

Target ambition
Please explain target coverage and identify any exclusions
Grainger’s climate target, set in 2020, is to reduce our absolute scope 1 and scope 2 greenhouse gas emissions by 30 percent by 2030, using a 2018 baseline. This target is science-based and follows the medium-term goals of the Paris Climate Agreement; however, it is not approved by the SBTi. Grainger has been methodical in identifying solutions to meet our scope 1 and 2 reduction target in close partnership with our Finance, Supply Chain, and Real Estate / Facilities functions, and has a clear path forward to aggressively employ those solutions. In fact, Grainger is well underway in meeting this target, with 68% of the reduction already achieved during 2021.

The Intergovernmental Panel on Climate Change (IPCC) has confirmed that in order to limit global warming to 1.5°C, the world needs to halve CO2 emissions by around 2030 and reach net-zero CO2 emissions by no later than 2050. In light of these longer-term goals, we also recognize the need to reduce scope 3 emissions. The majority of our scope 3 impact resides in product use phase, meaning the energy required for our customers to operate the products Grainger sells, such as the electricity required to run an industrial air conditioner or recharge the battery of a cordless drill over its lifetime. Our first step to setting a scope 3 reduction target will be to functionally model and develop reporting and accounting for product use phase. Grainger is actively pursuing scope 3 emissions improvement through engagement with our suppliers and customers to collectively progress on sustainability and emission goals.

However, we also believe there is opportunity to better define scope 3 target setting requirements for the distribution industry. We will be looking to partner with grading organizations to find a path forward for companies in this industry using our expertise. We look forward to being part of the solution and adding more clarity to this emerging topic.

Plan for achieving target, and progress made to the end of the reporting year
We expect the achievement of the target to be somewhat linear, though accelerated. At this point we expect to meet our reduction goal earlier than 2030, but are consistently analyzing our emissions data to ensure we are on track.

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?

Yes

(C4.5a)
(C4.5a) Provide details of your products and/or services that you classify as low-carbon products.

Level of aggregation
Group of products or services

Taxonomy used to classify product(s) or service(s) as low-carbon
No taxonomy used to classify product(s) or service(s) as low carbon

Type of product(s) or service(s)

Other, please specify (Offering of “environmentally preferable” Maintenance, Repair and Operations (MRO) product line (e.g., HVAC, motors, paper products, lighting, paint, etc.))

Description of product(s) or service(s)
Grainger’s Environmentally Preferable Products (EPP) offer products that are certified as low-carbon or enable avoided emissions through transparent reporting so customers can compare data and select a sustainable option. Examples of certified low-carbon designations include Carbonfree®, EnergyStar® and DLC® Approved. We engage with key suppliers to share Environmental Product Declarations on Grainger.com where available so customers may compare and calculate product life cycle emissions. We continue to engage with suppliers to add more low carbon certified products such as CarbonTrust and qualified calculations to avoid emissions as new EPP products are introduced to Grainger's portfolio.

Have you estimated the avoided emissions of this low-carbon product(s) or service(s)
No

Methodology used to calculate avoided emissions
<Not Applicable>

Life cycle stage(s) covered for the low-carbon product(s) or service(s)
<Not Applicable>

Functional unit used
<Not Applicable>

Reference product/service or baseline scenario used
<Not Applicable>

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

No

(C6.5) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.
Purchased goods and services

**Evaluation status**
Relevant, calculated

**Emissions in reporting year (metric tons CO2e)**
3144481

**Emissions calculation methodology**
Spend-based method

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Please explain**
Both direct and indirect emissions from goods and services purchased by Grainger were estimated using the Comprehensive Environmental Data Archive (CEDA) 5.0, which is an economic input-output database. Each category of Grainger’s purchased goods/services was mapped to an appropriate category of CEDA. The relevant emission factors from the CEDA database have been applied to Grainger's spend in order to calculate GHG emissions. The spend for products/services that have already been accounted for in other parts of the footprint (e.g., fuels, electricity) have been removed from this category. This category includes purchases by Cromwell, Grainger US, Mexico, and Canada.

**Capital goods**

**Evaluation status**

Average data method

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
100

**Please explain**
This category includes transmission losses from electricity and natural gas, and well-to-tank emissions of mobile fuel.

i) Description of the types and sources of data used to calculate emissions: The data to calculate these emissions comes from Grainger’s scope 1&2 emissions. This electricity and natural gas data comes from utility bills. The emissions factors used are the eGRID grid loss emission factors. The mobile fuel data comes from fuel purchase bills. The emissions factors used are the well-to-tank factors provided by DEFRA. The GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265).

ii) Description of the data quality of reported emission: The data quality of all sources for scope 3 emissions calculations is high.

iii) Description of the methodologies, assumptions and allocation methods used to calculate emissions: The methodology used was GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. 100% of the emissions from electricity and natural gas, as well as well-to-tank mobile fuel emissions were allocated to Grainger’s footprint.

Please explain
This category includes transportation in the US from suppliers to Grainger's owned facilities and between Grainger owned facilities, and to customers.

i) Description of the types and sources of data used to calculate emissions: This figure comes from fuel charge in our transportation department's billing system and uses the US EPA Smartway's avg MPG, US Govt. Fuel Economy’s avg diesel fuel cost in 2021. The emissions factors used are from the EPA's climate Leaders program. Emissions factors and the GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265)

ii) Description of the data quality of reported emission: The data quality is medium to high.

iii) Description of the methodologies, assumptions and allocation methods used to calculate emissions: The methodology used was GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. 100% of the emissions from fuel expense used in upstream transportation and distribution were allocated to Grainger’s footprint in the US.

Waste-type-specific method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
Grainger’s waste generated in operations includes all waste sent to landfill from Grainger buildings.

i) Description of the types and sources of data used to calculate emissions: The data to calculate these emissions comes from waste and recycling tonnage for Grainger facilities. The emissions factors used are from the EPA’s WARM model and the GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265). These emissions come from waste sent to landfills (0.52 tCO2e/ton). This data is compiled by Waste Management. The GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265).

ii) Description of the data quality of reported emission: The data quality of all sources for scope 3 emissions calculations is high.

iii) Description of the methodologies, assumptions and allocation methods used to calculate emissions: The methodology used was GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. 100% of the emissions from waste generated were allocated to Grainger’s footprint.

Please explain
Grainger’s business travel emissions include commercial air travel as well as employees travelling in non-Grainger owned vehicles for USA and Canada.

i) Description of the types and sources of data used to calculate emissions. The data to calculate these emissions comes from two sources. The commercial air travel data comes from our travel agency, Egencia, and it consists of flight length, type of flight, departure city, and arrival city. The emissions factors used are the DEFRA air travel emissions factors and the GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265). The emissions from employee travel in other vehicles all come from fuel combustion in passenger cars. This fuel data is compiled by Grainger’s third-party vehicle management company. The emissions factors used are for gasoline consumption from the EPA. The GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265).

ii) Description of the data quality of reported emissions: The data quality of all sources for scope 3 emissions calculations is high.

iii) Description of the methodologies, assumptions and allocation methods used to calculate emissions: The methodology used was GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. The assumptions and allocations for commercial air travel emissions that were used were based on DEFRA standards. 100% of the emissions from fuel used in employee travel in other vehicles were allocated to Grainger’s footprint.

Please explain
This category includes emissions from employees in North America commuting to work.

i) Description of the types and sources of data used to calculate emissions: The data to calculate these emissions comes from an employee transportation survey. Some of the data is estimated because it is extrapolated from this survey. The emissions factors used are from the EPA’s climate Leaders program. Emissions factors and the GWPs are from the IPCC AR5 (CO2 = 1, CH4 = 28, N2O = 265). The emissions from employee commuting come from fuel combustion in passenger cars.

ii) Description of the data quality of reported emission: The data quality from the employee transportation survey is good.

iii) Description of the methodologies, assumptions and allocation methods used to calculate emissions: The methodology used was GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. 100% of the emissions from fuel used in employee commuting were allocated to Grainger’s footprint.

C6.7

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?
No

C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00000757

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
98618

Metric denominator
unit total revenue

Metric denominator: Unit total
13022000000

Scope 2 figure used
Market-based

% change from previous year
13

Direction of change
Decreased

Reason for change
This metric decreased by 13% because of an absolute emissions reduction largely driven by emissions reduction activities, such as LED lighting projects, HVAC and building management system installations, and renewable energy installations. Changes in conversion factors year-over-year, and an increase in revenue year-over-year also attributed to the decrease.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

(C7.9a)
(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

<table>
<thead>
<tr>
<th>Change in emissions (metric tons CO2e)</th>
<th>Direction of change</th>
<th>Emissions value (percentage)</th>
<th>Please explain calculation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change in renewable energy consumption</td>
<td>Decreased</td>
<td>1.2</td>
<td>Our solar generation, and therefore consumption, increased by approximately 1681 MWh. This is a result of increased generation due to favorable weather and an expansion of solar panels at Grainger's NEDC at Bordentown, NJ. In the previous year, our Scope 1 and Scope 2 emissions were 103,096 tCO2e, therefore we arrived at 1.2% through ((1,191/103,096)*100) = 1.2%.</td>
</tr>
<tr>
<td>Other emissions reduction activities</td>
<td>Decreased</td>
<td>3.9</td>
<td>Grainger is routinely evaluating its assets to ensure the business can meet a growing customer demand. As a result of this growing demand on our facilities, Grainger continues investing in an expansion of solar panels at the new building management control systems, HVAC upgrades, employee engagement, and lighting projects. Overall, improvements have saved an estimated 4061 tCO2e in 2021. In the previous year, our Scope 1 and Scope 2 emissions were 103,096 tCO2e, therefore we arrived at 1.7% through ((4,061/103,096)*100) = 3.9%.</td>
</tr>
<tr>
<td>Divestment</td>
<td>Decreased</td>
<td>1.7</td>
<td>About half way through 2020, Grainger divested from its Fabory business and its business in China. On an absolute scale, these divestments would reduce Grainger's carbon footprint by about 3800 tCO2e. The 1800 tCO2e shown here is an approximation of emissions benefits for 2021 from partial year closures in 2020. In the previous year, our Scope 1 and Scope 2 emissions were 103,096 tCO2e, therefore we arrived at 1.7% through ((1,800/103,096)*100) = 1.7%</td>
</tr>

<td></td>
<td></td>
</tr>
<tr>
<td>Mergers</td>
<td>&lt;Not Applicable&gt;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Change in output</td>
<td>Increased</td>
<td>0.9</td>
<td>The pandemic affected occupancy at corporate sites facilities. For most of the 2020, they have been mainly vacant as employees worked remotely. This allowed lighting and HVAC energy to be set back. In 2021, we saw an approximate relative increase due to some return to office activities. Relative to 2020, we approximate an increase of 979 tCO2e. In the previous year, our Scope 1 and Scope 2 emissions were 103,096 tCO2e, therefore we arrived at 0.9% through ((979/103,096)*100) = 0.9%.</td>
</tr>
<tr>
<td>Change in methodology</td>
<td>Increased</td>
<td>1.5</td>
<td>In 2021, Grainger started collecting and determining emissions data related to refrigerants from HVAC equipment. Historically, these emissions have not been accounted for, but they will be starting now for calendar year 2021. In the previous year, our Scope 1 and Scope 2 emissions were 103,096 tCO2e, therefore we arrived at 1.5% through ((1,595/103,096)*100) = 1.5%.</td>

</tbody>
</table>

**Rationale for the coverage of your engagement**

In May of 2018, Grainger reorganized Global Product Management into Merchandising and Supplier Management to answer three basic questions: 1) What products should we sell, 2) How do we organize and present the products to show the value of the assortment, and, 3) What information do we need for customers to choose efficiently with confidence? This was a shift in the way we thought about our assortment decisions that affected the way we connect with our internal and external stakeholders. To understand how we could stay connected to our suppliers through this shift, we established Grainger’s Supplier Engagement Program. In 2019, the Merchandising and Supplier Management team established Grainger’s Supplier Engagement Program to proactively engage with the suppliers who are the most impactful to our business. We seek to partner with key strategic suppliers of sustainable products and solutions through quarterly meetings and invite suppliers to showcase their products at Grainger's North American Sales and Service Meeting. During this event, we bring our top performing suppliers together for a recognition event, Partners in Performance. This annual event also educates and informs the supplier community about Grainger’s key initiatives and strategy. Reflecting 2021 performance, Grainger continued to bestow a Sustainable Supplier Award for a third year in a row. Key performance factors included sales of Environmentally Preferable Products (EPP) that manage energy and/or contribute to lower, or more transparency in greenhouse gas emissions. Additionally, we considered their own environmental stewardship as a responsible business across environment, people and governance. While quantitative measures are factored into top supplier awards, key measures of success for this annual event are qualitative as we recognize partnerships with strategic suppliers at an exclusive event with top leaders.

**Impact of engagement, including measures of success**

Not only does the annual Sustainable Supplier Award recognize our keynote partner in the area of sustainability, this foundation for education and awareness has led to meaningful discussions not only around our supplier’s current performance within the EPP portfolio, but around new and planned innovations to bring energy efficient products to the market in addition to managing energy during product manufacturing. Supplier engagement includes a 100% audit of all products that are currently available in the portfolio in order to update and anticipate new product features to help customers manage energy, in addition discussing best practices around corporate climate action, and bringing additional value to customers through sustainable services. Measuring success includes monitoring the number of green products offered by suppliers and success is considered growth in the number of green products available. In 2021, the number of green products offered by suppliers grew by 1%.

</tbody>
</table>

**Please explain the rationale for selecting this group of customers and scope of engagement**

We work to create a more sustainable workplace for our customers and our communities through our Environmentally Preferable Product Portfolio. The Merchandising Strategy team conducts in-depth reviews of our portfolio to determine what we should carry in our assortment, and how it should be presented to customers through our website/catalogue. This is accomplished by listening to the voice of our customers via actual feedback submitted, paired with market trends. For example, customers are telling us that they have internal goals of making their facilities greener: saving energy, saving water, buying products with recycled content or finding solutions to help them recycle products. Our merchants use this feedback during their portfolio reviews to ensure we have the right sustainable product solutions. The team makes sure we capture all the relevant product information and display it in a manner to help a customer confidently choose the product that will help them meet their sustainability goals. In order to better understand our sustainability goals, we have hosted a targeted customer roundtable at an annual National Sales and Services Meeting. As a result, we enhanced our data-driven EPP analytics. Customers taking science-based climate action seek energy efficient products that are certified as low-carbon or enable avoided emissions through transparent reporting so customers can compare data and select a sustainable option. Examples of certified low-carbon designations include Carbonfree®, EnergyStar® and DLC® Approved. We engage with key suppliers to share Environmental Product Declarations on Grainger.com where available so customers may compare and calculate product life cycle emissions. We offer our customers one of the largest green SKU counts in the industrial distribution market, providing more ways to reduce energy consumption, conserve water, reduce waste and improve indoor air quality. In addition, the company offers data driven EPP analytics to our customers helping them track, report and grow their green spend. Similarly, we equip our customer-facing team members with training, sales tools and marketing support so that they can help customers achieve meaningful progress towards their sustainability goals and initiatives. The % Scope 3 Emissions attributable to this group includes the emissions associated with product use phase.

**Impact of engagement, including measures of success**

We routinely review our EPP for opportunities to provide tailored solutions to customers with sustainability and EPP procurement goals. Our EPP Portfolio offers nearly 100,000 SKUs. We look at the sales performance of the EPP portfolio as our measure of success in helping customers select the products that will help them meet their sustainability goals. In 2021, EPP sales totaled $875 million, a 23 percent increase over 2020. Grainger’s measure of success for the EPP portfolio is when the EPP sales growth rate is higher than general sales growth rate.
C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization’s purchasing process?

Yes, climate-related requirements are included in our supplier contracts

C12.2a

(C12.2a) Provide details of the climate-related requirements that suppliers have to meet as part of your organization’s purchasing process and the compliance mechanisms in place.

- **Climate-related requirement**
  - Complying with regulatory requirements

- **Description of this climate-related requirement**
  Grainger suppliers are contractually obligated to comply with all regulatory requirements for the products they sell to us, and communicate all regulatory considerations impacting the sale of their products to us. Suppliers routinely provide regulatory and sustainability information to Grainger on the products we carry in our portfolio. Suppliers are contractually obligated to notify Grainger in advance of any regulatory changes impacting their products, and we additionally prompt all suppliers to review and update their regulatory information on an annual basis. Grainger verifies and stores this information upon receipt, and we utilize third-party consulting services to validate any sustainability claims. Grainger also reinforces its commitment to regulatory and sustainability through requirements in our Supplier Code of Ethics as well as our Supplier Handbook.

| % suppliers by procurement spend that have to comply with this climate-related requirement | 100 |
| % suppliers by procurement spend in compliance with this climate-related requirement | 100 |

- **Mechanisms for monitoring compliance with this climate-related requirement**
  - Off-site third-party verification
  - Supplier scorecard or rating

- **Response to supplier non-compliance with this climate-related requirement**
  Retain and engage

C12.3

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

| Row 1 |
| Direct or indirect engagement that could influence policy, law, or regulation that may impact the climate |
| Yes, we engage indirectly through trade associations |

| Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement? |
| No, and we do not plan to have one in the next two years |

| Attach commitment or position statement(s) |
| <Not Applicable> |

| Describe the process(es) your organization has in place to ensure that your engagement activities are consistent with your overall climate change strategy |
| It is Grainger's policy not to actively engage with policymakers. Grainger’s Business Conduct Guidelines prohibit the use of company funds or assets for political purposes, including for contributions to any political party, candidate, or committee. Grainger may engage indirectly in activities that could influence policy, law, or regulation that impacts the climate through membership in trade associations. Grainger supports trade associations such as the United States Chamber of Commerce and the National Association of Wholesaler-Distributors. To the best of our knowledge, our support of these organizations does not play an indirect or direct role in activities that influence climate change policy. |

| Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate |
| <Not Applicable> |

| Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate |
| <Not Applicable> |

C12.3b
(C12.3b) Provide details of the trade associations your organization engages with which are likely to take a position on any policy, law or regulation that may impact the climate.

**Trade association**
Other, please specify (National Association of Wholesalers)

**Is your organization’s position on climate change consistent with theirs?**
Unknown

**Has your organization influenced, or is your organization attempting to influence their position?**
Unknown

**State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)**
We have not specifically evaluated the National Association of Wholesaler's position on climate change, so we are not able to comment on how the position differs, if at all. We are also not attempting to influence their position at this time.

**Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)**
74152

**Describe the aim of your organization’s funding**
Contributions are directed to receiving updates regarding specific policy or legislative initiatives and discussing strategic approaches. $20,000 of the funding was directed towards the NAW Antitrust Task Force.

**Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

**Trade association**
US Chamber of Commerce

**Is your organization’s position on climate change consistent with theirs?**
Unknown

**Has your organization influenced, or is your organization attempting to influence their position?**
Unknown

**State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)**
We have not specifically evaluated the US Chamber of Commerce’s position on climate change, so we are not able to comment on how the position differs, if at all. We are also not attempting to influence their position at this time.

**Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)**
10000

**Describe the aim of your organization’s funding**
Contributions are directed to receiving updates regarding specific policy or legislative initiatives and discussing strategic approaches. The Company also funds the U.S. Chamber Foundation at the $10,000 level. This foundation educates the public on conditions for businesses and communities to thrive.

**Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

C15. Biodiversity

---

C15.1
(C15.1) Is there board-level oversight and/or executive management-level responsibility for biodiversity-related issues within your organization?

<table>
<thead>
<tr>
<th>Board-level oversight and/or executive management-level responsibility for biodiversity-related issues</th>
<th>Description of oversight and objectives relating to biodiversity</th>
<th>Scope of board-level oversight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes, executive management-level responsibility</td>
<td>Responsibilities: As part of the Environmental, Social, and Governance (ESG) Leadership Council’s role to provide strategic direction and oversight of Grainger’s ESG program and to integrate relevant ESG initiatives into our business operations and strategy, members assess Grainger’s ESG materiality matrix to inform and prioritize programs and opportunities. From Grainger’s materiality matrix, issues that clearly impact biodiversity include water stewardship, hazardous materials management, and recycling &amp; waste are identified. These issues will be monitored by Grainger’s ESG Leadership Council. Titles: The titles of all members of the ESG Leadership Council members are: Chairman &amp; CEO; SVP &amp; CFO; SVP &amp; CHRO; SVP &amp; General Counsel; VP &amp; President, Merchandising and Supplier Management; VP, Network Strategy &amp; Transportation; Global Lead ESG and DEI (Sr. Director, Diversity &amp; Corporate Responsibility). Overall ESG Governance: The Company integrates ESG initiatives into its strategy and daily operations at each level of its business. This begins with general ESG oversight by the Board Affairs and Nominating Committee (BANC), which is comprised of all independent Directors. The BANC annually reviews the Company’s ESG programs and reporting, including environmental and sustainability, social responsibility to its communities, governance, the Company’s culture, talent strategy, and diversity, equity and inclusion. In turn, the Compensation Committee oversees the Company’s programs and policies for human capital management and assists the BANC in its oversight of the Company’s programs and policies with respect to employee engagement and leadership effectiveness. The Board includes one Director with expertise in corporate sustainability and one Director with expertise in environmental matters.</td>
