

WHAT IS AI?

A SUMMARY

AI or Artificial Intelligence is precisely that. It is intelligent but artificial because it is a computer-based model. And it is getting better.

However, we all read the stories; for example, internet search is getting conversational, asking questions, and getting answers.

Remember 'Ask Jeeves'? Obviously, it went beyond its time in 2005 and is now in the Google Graveyard. Yet, it is suspected that the new conversational platforms won't go away so easily.

AI is good at many things, from playing chess games and directing robots to driving cars. A conundrum.

The chess-playing App certainly cannot drive a car or direct a robot. And vice versa. That is the challenge; whereas a human can or could do it all, the computer can't, at least not yet.

To answer the question, what is AI, then think of it as thousands of answers to questions already done; it's just a matter of the right question being directed down a series of paths to each correct answer.

The software folks configure these paths using 'decision trees' or 'neural networks' a bit like knowing hundreds of possible chess moves and the outcome of each one, given other moves happening.

So, can we use AI to gain financially? Yes, there are ways to benefit, but that's the subject of another article. Meantime, feel free to browse the Azaries website at www.azaries.com.

Azaries is an award-winning investment technology.

www.azaries.com.

The software powers the Pantiles Wealth Creation LLP investment fund launching in 2023. www.pantiles.uk (Regulated Number number 839882)

The results speak for themselves:

2019 +67%
2020 +62%
2021 +59%
2023 +87%

A Unique approach:

- Ultra Low Risk
- Blue-chip focused
- Efficient Portfolio Spinning
- Consistent
- Entirely New
