We've scored you against the following key areas

100%

Location

This section was based on your house features, like the roof material, the age of the home, and where you plan to install the solar panels.

80%

Lifestyle

In this section, we took into consideration how long you've lived in the house, energy-efficiency upgrades you have or plan to make, and your primary motivation to go solar.

97%

Financial

For this section, we evaluated aspects such as how you plan to finance the solar panels, your credit score, income, and your electrical bill.

Your Scores Overview

Score key by color:

- High (green)
- Medium (gray)
- Low (red).

If you scored above 60, that indicates that you have a high likelihood of being a good fit for solar energy. This score demonstrates that you have a relatively low amount of shading on your property, sufficient roof space for solar panels, and live in an area with a high amount of solar irradiance. Additionally, it suggests that your energy needs and usage patterns are well-aligned with the benefits of solar energy. Therefore, it would be wise to explore your solar energy options further to determine if it's a viable and cost-effective solution for your energy needs.

Your Overall Score

Financial tips to improve your score.

...

Going Solar may not be feasible for you at this time. Solar panel installation and maintenance require a significant upfront cost that might not be suitable for your current financial readiness.

While going solar can bring long-term benefits, such as lower energy bills and a reduced carbon footprint, it's crucial to evaluate your budget and savings to ensure that you can afford the initial investment and ongoing expenses.

Here's where you're strongest

Financial score

Your house is great for Solar!

Based on your financial situation, it seems like going solar could be a great decision for you. Solar energy systems can help you save money on your monthly electricity bills and, over time, can provide a return on your investment.

Overall, if you are financially stable and looking to reduce your monthly expenses, going solar could be a smart choice for you. It's a great way to invest in your home, reduce your carbon footprint, and save money in the long run.
