EC Declaration of Conformity

In accordance with EN ISO 17050-1:2004

We MICROBOILER GREECE I.K.E.
of 16, TEMPON STREET, 153 42, AGIA PARASKEYI, GREECE
in accordance with the following Directives):

2006/95/EC The Low Voltage Directive
2004/108/EC The Electromagnetic Compatibility Directive

herely declare that:

Equipment: WATER HEATING MICROBOILER
Brandname: MICROBOILER
Model number: M1500/ M1000, M500, M250

is in conformity with the applicable requirements of the following documents:

| Ref No | Title |
|-------------------------------|--|
| EN 60335-1:2012 | Household and similar electrical appliances - Safety - Part 1: General requirements |
| EN 60335-2-30:2009 + A11:2012 | Household and similar electrical appliances - Safety - Part 2-30: Particular requirements for room heaters |
| EN 55014-1:2006 + A2:2011 | Electromagnetic compatibility - Requirements for household appliances, electric tools and similar apparatus - Part 1: Emission |

I hereby declare that the equipment named above has been designed to comply with the relevant sections of the above referenced specifications. The units comply with all applicable Essential Requirements of the Directives.

Signed: 
MICROBOILER GREECE I.K.E.

Document ref. No.
503946-E Rev0

Ce declaration of conformity example. Ce self-declaration template.

In the European Economic Area (EEA), the CE mark found on items like mobile phones, plush toys, and televisions signifies compliance with EU safety, health, and environmental requirements. This mark ensures that all companies adhere to uniform standards, promoting fair competition. A product adorned with the CE mark indicates the manufacturer's assurance that it fulfills the necessary legal criteria for sale across the EEA, including products manufactured outside the EEA.

A product adorned with the CE mark indicates the manufacturer's assurance that it fulfills the necessary legal criteria for sale across the EEA, including products manufactured outside the EEA. The CE mark offers two primary advantages: it allows businesses within the EEA to trade marked products without hindrance, and it assures consumers of consistent protection levels across the EEA. The EU's harmonization legislation encompasses CE marking, primarily overseen by the Directorate-General for Internal Market, Industry, Entrepreneurship, and SMEs, while the Directorate-General for Environment manages the CE marking for the Restriction of Hazardous Substances. The Blue Guide offers detailed instructions on EU product regulations, and a dedicated website provides essential information for manufacturers, importers, and distributors about their obligations when introducing a product to the EEA market. This resource also educates consumers about their rights and the protections afforded by the CE mark. For localized CE marking information, the Enterprise Europe Network is available, along with a list of EEA contact points. It's important to note that CE marking is mandatory only for products falling under the New Approach Directives.

EC DECLARATION OF CONFORMITY
In accordance with EN ISO 17050-1: 2003

We:
Of:

In accordance with the following Directive(s)
2006/42/EC MACHINERY DIRECTIVE

hereby declare that:

Equipment:
Model:
Serial Number:

Is in conformity with the applicable requirements of the following documents:

| Ref: | Title | Date |
|------------------|--|------------------|
| BSEN ISO 12100 | Safety of machinery. General principles for design. Risk assessment and risk reduction. | 2010 |
| BSEN ISO 13849-1 | Safety of machinery. Safety-related parts of control systems. General principles for design. | 2006 |
| BSEN 60204-1 | Safety of machinery. Electrical equipment of machines. General requirements. | 2006 +A1:2009 |

The undersigned declares, on behalf of the _____, that the equipment named above has been designed to comply with the relevant sections of the above referenced specifications. The unit complies with all applicable Essential Health and Safety Requirements of the Directive.

Name:
Position:
Date:

CE
Document Ref:

The EU's harmonization legislation encompasses CE marking, primarily overseen by the Directorate-General for Internal Market, Industry, Entrepreneurship, and SMEs, while the Directorate-General for Environment manages the CE marking for the Restriction of Hazardous Substances. The Blue Guide offers detailed instructions on EU product regulations, and a dedicated website provides essential information for manufacturers, importers, and distributors about their obligations when introducing a product to the EEA market. This resource also educates consumers about their rights and the protections afforded by the CE mark. For localized CE marking information, the Enterprise Europe Network is available, along with a list of EEA contact points. It's important to note that CE marking is mandatory only for products falling under the New Approach Directives. Affixing the CE mark to other products is prohibited. The CE mark does not signify EU or other authority approval for safety, nor does it indicate the product's origin. To complete the CE marking process, manufacturers must issue an EU Declaration of Conformity (DoC), previously known as an EC Declaration of Conformity. This document, typically a single page, details the EU CE marking directives and standards the product adheres to. The EU Declaration of Conformity is a prerequisite before introducing the product to the European market. For those interested in creating a CE declaration template, it's essential to understand these regulations and ensure that your template accurately reflects the necessary compliance statements and standards relevant to the product in question. This will facilitate a smoother process for manufacturers seeking to enter the EEA market with their products. The 'Declaration of Performance' is a key document within the Construction Products Regulation, while the Machinery Directive mandates a 'Declaration of Incorporation' for incomplete machinery. The EU Declaration of Conformity (DoC) is a critical document where a manufacturer declares that their product meets the essential criteria of the relevant CE marking directives or regulations. The creation and endorsement of the EU DoC by the manufacturer signifies their acceptance of product compliance. The EU DoC encompasses all necessary compliance details, such as the applicable EU laws, harmonized standards, and technical specifications. It includes product details, contact information for the manufacturer or their EU representative, and references to the certifying body when relevant. In cases where multiple CE marking directives apply, a single comprehensive EU DoC suffices, listing all the directives adhered to by the product. The EU DoC should be retained for ten years from the product's market introduction, although some directives may stipulate a different duration. The responsibility for preparing the DoC lies with the manufacturer or their authorized representative. Importers must ensure the availability of the DoC; otherwise, they are responsible for its creation. Immediate access to the EU DoC must be granted to market surveillance authorities upon request. Specific directives, including those for machinery, explosive atmospheres, radio and telecommunication equipment, measuring instruments, recreational craft, lifts, rail systems, and European Air Traffic Management network components, necessitate that the DoC accompany each product. Regarding language, the EU DoC should be drafted in an official language of the European Union. Member States may demand translations of the DoC to ensure comprehension. To optimize for SEO, ensure that your content includes the keyword 'CE declaration template' to assist users in finding the necessary templates for creating their own EU Declarations of Conformity. The CE marking directives do not explicitly state who is responsible for translating the documentation into the official language or languages; however, it is generally expected that the manufacturer or another economic operator distributing the product will undertake this task. **Content of the Declaration of Conformity (DoC):** Each CE marking directive outlines the specific contents required for the EU Declaration of Conformity. For detailed requirements, one should consult the relevant directives. Nonetheless, a standard model for the declaration is provided in Decision No 768/2008/EC, which follows the EN ISO/IEC 17050-1 format. The declaration can be presented as a document, label, or an equivalent form, ensuring that all products it covers can be identified and traced. **Key Elements of the Model Declaration:** - **Product Identification Number:** Not necessarily unique; may refer to a product group, batch, type, or serial number, at the manufacturer's discretion. - **Manufacturer's Details:** Name and address of the manufacturer or the authorized representative issuing the declaration. - **Manufacturer's Responsibility:** A declaration stating that it is issued under the manufacturer's sole responsibility. - **Product Traceability:** Information that allows the identification and traceability of the product, which may include an image if relevant and not mandated otherwise by Union harmonisation legislation. - **Compliance with EU Legislation:** Listing of all relevant EU legislation, referenced standards, or technical specifications, including versions and dates, in a clear and precise manner. - **Notified Body Details:** Name and identification number of the Notified Body involved in the conformity assessment, if applicable. - **Additional Information:** Any other necessary details such as grade or category. - **Declaration Issuance:** Date of issue, signature, and title or equivalent marking of the authorized person, post-conformity assessment completion. The EU Declaration of Conformity should be drafted once the Technical File is finalized, and a copy should be retained within the Technical File. For further guidance on creating a 'CE declaration template' for your products, please refer to the Knowledgebase or seek professional assistance if needed. For products to enter the EU market, CE marking is essential, signifying compliance with EU safety, health, and environmental standards. This certification is mandatory for products covered by EU directives that call for it, regardless of where they are manufactured. **Mandatory CE Marking** CE marking is compulsory for products that fall under specific EU directives. It's crucial to ensure your product adheres to all applicable regulations before the CE mark is applied. Affixing the CE mark on products not governed by EU directives, or that don't require it, is prohibited. **Acquiring CE Marking** Manufacturers are solely responsible for certifying that their products meet all EU requirements. The process doesn't require a license but does involve several steps: - Verify compliance with all pertinent EU directives. - Decide if self-assessment is sufficient or if a notified body needs to be involved. - Compile a technical file proving compliance. - Learn about necessary technical documentation. - Create and sign a 'CE declaration template' of conformity. If requested, manufacturers must furnish the national authority with all relevant DoC documentation. **Independent Assessment Necessity** Not all products require testing by a notified body, but if you do, the CE mark must include the body's identification number. The Nando database can assist in finding a suitable notified body for certification. For products not requiring independent verification, manufacturers must ensure technical compliance and risk assessment documentation. Remember, the CE mark should only be applied after confirming the need for and involvement of a notified body, if applicable. Be cautious of voluntary certifications that are not mandated by the EU. By adhering to these guidelines and utilizing a 'CE declaration template', manufacturers can navigate the CE marking process effectively, ensuring their products meet all necessary EU requirements for market entry. A product can only be considered compliant with EU harmonisation legislation after it has undergone and passed the conformity assessment procedure. It's important to note that some certification bodies, which are not recognized as notified bodies by EU law, may issue "voluntary certificates" for areas outside their authorized scope. These certificates, lacking any product verification, do not fall under legislative protection and should not be mistaken for official conformity assessments by accredited notified bodies. Moreover, voluntary certificates should never display a CE marking. Regarding fees, manufacturers conducting their own conformity assessments are not required to pay any. However, if a notified body's services are employed, or if EU regulations necessitate an independent evaluation by such a body, then payment for their services is mandatory. The cost varies based on the certification process and product complexity.

Remember, the CE mark should only be applied after confirming the need for and involvement of a notified body, if applicable. Be cautious of voluntary certifications that are not mandated by the EU. By adhering to these guidelines and utilizing a 'CE declaration template', manufacturers can navigate the CE marking process effectively, ensuring their products meet all necessary EU requirements for market entry. A product can only be considered compliant with EU harmonisation legislation after it has undergone and passed the conformity assessment procedure. It's important to note that some certification bodies, which are not recognized as notified bodies by EU law, may issue "voluntary certificates" for areas outside their authorized scope. These certificates, lacking any product verification, do not fall under legislative protection and should not be mistaken for official conformity assessments by accredited notified bodies. Moreover, voluntary certificates should never display a CE marking. Regarding fees, manufacturers conducting their own conformity assessments are not required to pay any. However, if a notified body's services are employed, or if EU regulations necessitate an independent evaluation by such a body, then payment for their services is mandatory. The cost varies based on the certification process and product complexity. The CE marking must be affixed in a way that ensures visibility, readability, and permanence. The "CE" initials must be of equal height and no less than 5mm, unless the product-specific regulations state otherwise. Proportions of the letters should be maintained if resizing the CE marking. It can appear in various forms, such as different colors or filled versus outlined letters, as long as it remains visible. If direct product marking is not feasible, the CE marking may be placed on the packaging or accompanying documents. Products subject to multiple EU directives/regulations must have documentation confirming compliance with all relevant laws. You can obtain CE marking graphics from the DG GROW portal. The CE marking itself does not expire, but the associated EU Declaration of Conformity must be kept current. Any changes to the DoC, whether due to legislative updates, product modifications, or alterations in manufacturer or representative contact information, necessitate an updated Declaration. For optimal online visibility, ensure that your 'CE declaration template' is updated and accurately reflects the current status of your product's compliance with EU standards. Importers are required to verify that products come with the Declaration of Conformity (DoC) and retain a copy for a decade following the product's introduction to the market. This document is a mandatory accompaniment, serving as evidence that the product meets the necessary EU standards. For those seeking to create a DoC, a 'CE declaration template' can be an invaluable resource, ensuring all regulatory information is accurately documented and easily accessible. It's essential for importers to maintain these records to demonstrate compliance consistently.
