Thing explainer word list

Thing words list. 3 words things list. Thing explainer complicated stuff in simple words.

Thing Explainer: A Simple Guide to Complex Things Randall Munroe, the creator of xkcd and the bestselling author of What If?, has released a new book that explains how things work in simple words. The book features brilliant diagrams and drawings that show the inner workings of various objects, from the nuclear bomb to everyday items like microwaves. The concept behind Thing Explainer is to explain complex concepts using only drawings and 1,000 common words. This approach allows readers to understand how things work without needing a deep understanding of scientific jargon. Munroe's book answers questions about everything from bridges to cells, providing insights into the world around us. One of the unique aspects of Thing Explainer is its use of blueprints-style drawings and a limited vocabulary. The book includes examples of how Munroe determined which words would be included in his list. Thing Explainer is not just for adults; it's also suitable for children aged 5 to 105 who are curious about how things work. The book has received positive reviews, with readers praising its ability to make complex concepts accessible and fun to learn. Thing Explainer is the second published book by Randall Munroe, following his successful What If? series. The book is available in paperback and can be purchased from various online retailers, including Amazon. The comic 1608: Hoverboard was a significant release, directly celebrating the book's launch. It was not an ordinary comic, as it marked the first "real" game comic on xkcd. Inspired by 1110: Click and Drag, users could navigate through a larger picture by controlling Cueball on a hoverboard using arrow keys or device tilting for mobile devices. The game featured multiple themes, including Star Wars and The Lord of the Rings. References to the book and other comics are scattered throughout. On release day, Randall Munroe released a simple writer that accepted only 1000 words from the book's list, allowing others to try creating their own explanations. The author has compiled a list of the 1000 most frequently used words in the English language, which is actually written out as "ten hundred" instead of using numbers. This list was created by Randall through extensive research in various sources, including fiction texts and text messages. He notes that zero and nine are not included in the list, but other numbers like one to ten, twenty, thirty, and hundred can be used. The list only includes a single version of each word, while its different forms and endings are allowed but not counted towards the 1000 limit. This means that many more words can be used than the 1000 listed, but only those with unique meanings are included. The author provides examples of how this applies to words like "talk", "be", and "goer", which allow for variations in their usage. Some common swear words were intentionally left out of the list, despite being among the most frequently used words in everyday language. However, the author notes that he didn't want to include them anyway and instead wants to thank people by writing their names out, even if they're not on the list. The Moon lander and its two astronauts can be seen on the Moon in "Worlds Around the Sun". In this book, everything made of hydrogen is similarly named by using a quote from the comic, "Oh, the humanity", which becomes "Oh the Humans!" instead. The book also references other comics, such as "Hoverboard" and "Subduction License". In the explanation for "Big flat rocks we live on", there's an obvious reference to the comic "1388: Subduction License". However, it only features the last three panels after the first panel, which isn't included due to the words "Subduction License" not being allowed in the book. The middle two panels are also referenced, with some of their words found in the list at the back of the book. Here's what's written in these panels: "What are you doing? Stop it! Stop it! What be you do? Stop it! Stop it!" All versions of these words would be allowed in the book except for the last word, "Augh", which is just a sound effect. The book also references other comics, such as "Converting to Metric" and "Photos". There's even a small drawing that's just a different version of an idea behind another comic. Additionally, there are direct references like "Click and Drag" where Cueball can be seen floating outside the cockpit with his balloon in "Stuff you touch to fly a sky boat". Other less indirect references include radio-controlled helicopter chases across longer bridges in "Tall roads", as well as butterfly nets used for catching strange things. The book mentions several comic strips from xkcd, including references to familiar concepts like spiders weaving a shirt, jumping mechanics, and various sports. Comics like Arachnoneurology feature spiders in different contexts. The Spider-Verse is referenced where spiders create a sail on a ship under a bridge. There's also Tree of Life featuring a scene with biters having eight legs as well as Jump referencing a character's ability to jump like Cueball, but his height remains constant. The book lists categories from xkcd comics, including Butterflies, Space probes such as the Curiosity Rover and Mars rovers, sports like American football, Baseball, Basketball, and Soccer. There are also references to other sports in Hole-making city boat with soccer, table tennis, and pool, as well as Ten pin bowling. Additionally, Tree of Life depicts animals from xkcd comics, including a pegasus-like horse and octopuses in multiple scenes. Sharks are featured in several explanations, including Heavy metal power building and The USS Laws of the Land. City Boat features Tree of Life and Sky Toucher. The shark situation in Big Tiny Thing Hitter reminds one of the shark in Outreach 585. Giraffes appear twice, both times measuring four weight and length, in How to Count Things and Tree of Life. Dinosaurs are not prominent but are shown in two explanations: three types of dinosaurs in Tree of Life, including Velociraptors and Apatosaurus, which also appears in Sky Toucher without being allowed. Squirrels appear in four explanations, most notably in Boxes That Make Clothes Smell Better where a squirrel drawing has a notation asking why it's in your house. Other animals include Whales and ants appearing in several Book Cover Cueball can be seen on the cover overlooking some labeled pictures. The back cover was also available Preview pages are part of Curiosity entry, using only blue, since red wasn't used inside the book. Word decoder is a fun aspect as it reveals complex words behind simple word phrases, like 'bird' being Cygnus and 'Pretend Fire Animal' being Dragon. A writing checker tool can be accessed at xkcd.com/simplewriter for those who want to write using only simple words. The most frequently used words in Thing Explainer were chosen from a pool of thousands of options. This selection process involved combining various methods for measuring how often people use certain words to create a single set of ten hundred words that many people find easy to understand and familiar. I'd like to thank James Zetlen, who helped make the word checker work on other computers, not just mine.
