## Secret care cafe cheats

**My cafe level up cheats. Secret care cafe cheat engine. Secret care cafe money cheat. My cafe cheat codes.**

Secret Care Cafe, a 2D game developed by Rare Alex, needs your confirmation as a human to proceed. To help you unlock all galleries, we've prepared a save file for download, which will also work up to version 0.8.38. Here are the details: A full gallery save file is available; just rename Savedata6 to overwrite any existing save file. Installation instructions: Extract into %localappdata%\Secret\_Care\_Cafe (file size: 10 KB). Download from Google Drive if needed. New features in this version include a skip counter, which resets after you play without skipping for six days straight. A bad ending will be triggered if you continue to skip too much. To avoid this, use the cheat button available in the Title Menu. This feature was added to encourage players to engage with the game more actively. - A late-game perk to disable a certain aspect will be available for purchase. - The 'Endings' button has been added to the Gallery, allowing players to view unlocked endings in their entirety (not just CGs). - Additional sound effects have been implemented. - A fail-safe system has been introduced to maintain correct dialogue text alignment. - Various bugs were fixed: - UI in summary screen not fading out correctly - Incorrect max CGS count for Cynthia - Incorrect unlocked CGS count for Rai - Issues with Tell# cgs in the Gallery - Foresight lvl 2 displaying favorite maid before unlocking that information in clients book - Wrong outline for overcharged Cynthias Take Out skill - Incorrect CGs displayed while using Cynthias overcharged skills - Alignments of text in gallery sometimes going out of bounds - Cash display in shop disappearing - Hint box going out of bounds in perk menu - Rearrangements were made in the Gallery's button layout. - Typos were corrected. - A crashing issue at the end of each day was fixed. - A workaround for MAC players experiencing an error was provided: launch Terminal and run the command `xattr -cr /path/to/application.app`. - The developer encourages feedback and reports any bugs or suggestions through comments, private messages, or Discord.
