Enshrouded building guide

Enshrouded's voxel-based base building system allows players to construct impressive structures that can serve as homes or showpieces for others. The unique building mechanic in this survival game can be overwhelming for new players, which is why we're here to guide you through the process. To begin building your dream home, you need to claim a piece of land by placing a Flame Altar. Crafting one requires 6 stones, and once created, it serves as a zone marker, allowing you to build within an area of 40x40x40m. The altar's radius can be expanded through upgrades, but be aware that removing or relocating it permanently deletes all building blocks and chests within its range. For building, you'll need the Construction Hammer, which can be crafted with a single stone. You'll also gather resources like raw materials to craft basic building blocks at your Workbench. Unlocking more advanced blocks will require progressing through the game and acquiring exclusive items from mini-bosses or other challenges. The process begins by selecting the construction hammer in your hand and pressing the TAB button, which opens the building menu. With an understanding of this UI, you'll be able to navigate and build with ease. The bottom section of the screen features your current toolbar, displaying the selected blocks and available building block types with quantities. To navigate between categories, use the ALT key combined with mouse wheel scrolling. Each category has an icon: green for terrain editing, blue for building blocks, and orange for roof tiles. Pressing CTRL and using the mouse wheel allows you to scroll through material types used in various variants of blocks. The building grid restricts 90° rotations, but furnishing elements allow for free rotation. Snap points can be toggled on or off by pressing the X key. When enabled, blocks will align automatically with adjacent blocks. In Enshrouded mode, your block will be placed where you aim with your cursor. To place a block at the desired location, move your character and cursor. The Q key combined with mouse wheel scrolling can adjust block position further or closer to your character. The resource counter beside the cursor displays how many blocks are being used and how much resources remain. When blocks merge, their resource cost decreases due to optimized material usage. Distinguish between building and removing voxel vs prefab parts, as precision is crucial for voxel building. Using prefab structures and voxel building allows for rapid assembly of a building framework, enabling easy modifications and detailed features. Prefab blocks maintain their integrity, allowing for precise adjustments and removal, making it easier to create custom designs. Voxel building enables precision down to individual blocks, perfect for fine-tuning roof details or adding complex features. Use contextual shaping of blocks to add depth and personality to your build through experimentation. Combine different block types, observing how they interact, to discover new design possibilities. Don't forget essential items like windows, doors, furniture, lights, and decorative elements that add ambiance. However, remember to prepare spaces for these items beforehand to ensure a seamless fit. Place windows and doors by adding them to your toolbar, selecting, and positioning. Furniture can be freely rotated by disabling snap points and using the R key. To create private games with friends in Enshrouded, start by booting up the game and going through character creation. From the main menu, select Play and choose between Private, Host, or Join options. As a host, you can create a private password-protected session or open it to all. Join a server or create your own world. All progress transfers between online and offline worlds, so your skills, gear, and map reveal progression will be shared. To create a private world for friends, access the Host game option and press Create next to New Game. This will generate a new world. To start playing with friends, change the Game Settings on the right side of the screen before launching the world. The Session Visibility setting currently only offers one option: Everyone. This means your server will be visible to all players, but an upcoming update will allow you to hide your server from random joiners. The Session Size setting determines how many players can populate your world, with a minimum count of 2 and a maximum of 16. Choose the desired number of players, then press Edit to rename your world before pressing Play. In the Host A Game window, set a Session Password to restrict access to only those with the correct password. Without a password, your server will be open to anyone. Once you've done this, click Start to launch your private world. You'll begin playing from the start of the game, and your friends can join you as soon as you exit the cryo chamber. Note that the host's PC is acting as a private server, so they must remain online for others to play. Also, everyone's progress will be saved on the host's machine. Enshrouded boasts an innovative building system that allows users to construct various structures ranging from quaint hobbit holes to grand fortresses. Your base not only serves as a visually appealing aspect but also plays a crucial role in your adventures across Embervale. It's where you can craft essential items such as food, weapons, and armour before embarking on expeditions. Additionally, resting within your base grants a beneficial Rested buff that aids in combat situations. To aid users in building their dream Enshrouded castle, we've compiled a list of useful tips to get started. Below are instructions on how to craft the numerous Building Blocks available in Enshrouded, including a tip on terraforming without requiring a pickaxe. This page covers: To access this content, please enable targeting cookies. Base-building is an integral aspect of Enshrouded's gameplay; your home serves as a place where you can rest, process materials, and craft items. Certain NPCs require specific shelters to be built around them before certain items can be crafted. For instance, the Carpenter NPC necessitates that a shelter be constructed before crafting specific items. One of Enshrouded's initial quests involves building a base; your first step will be crafting a Flame Altar. This is an item that creates a protected zone where you can build your base. A Flame Altar requires 5 stones to make and can be crafted in the manual menu under 'essentials'. Once crafted, place the Flame Altar on the ground by adding it to your hotbar. Next, create a Workbench by combining 3 strings and 8 wood logs in the manual crafting menu; once made, add it to your hotbar as well. With both items placed, proceed to craft a Construction Hammer at the Workbench using only one stone. Before you can start building, you'll need to craft Building Blocks from raw materials. These blocks are usually created at the Workbench and are essential for constructing buildings in Enshrouded. For a complete list of Building Blocks and their respective crafting recipes, refer to our section on Building Blocks below. Now that you've crafted the necessary tools, equip the Construction Hammer and access the building menu by pressing the Tab key. From there, you can cycle through different building shapes using ALT + scroll and materials with CTRL + scroll. You can also rotate build pieces by pressing R or delete sections with right-click. There's an option to toggle 'snapping' on or off for easier piece placement. When building in this game, it's all about having the right foundation and tools at your disposal. Start by laying down some basic blocks to create a flat base layer and get a feel for your design. For finer details, switch to individual block placement mode - just cycle through the menu or use the hotbar to access specific blocks. If you need to delete a block, right-click is your friend. To expand your building area, upgrade your Flame Altar with some necessary materials like Shroud Cores or Shroud Liquid. The first level requires one Shroud Core, which can be found by defeating enemies in Shrouded areas or crafted by the Alchemist. Later upgrades will demand higher Flame Levels, but don't worry - you can upgrade that too at your Flame Altar. You can place multiple Flame Altars to overlap building zones and increase the size of your area. Initially, this is limited to two altars, but as you upgrade your global Flame Level, you'll be able to place up to eight. Not only are these altars useful for fast travel points, but they also serve as respawn locations in case you meet an untimely demise. If you're looking to delete a Flame Altar, simply interact with it and choose the 'extinguish flame' option - just be aware that this will wipe out all your creations within its zone. The system does give you 30 seconds to change your mind if needed, so use that wisely. With these tips in mind, get building (and terraforming)! In Enshrouded, various Building Blocks are available for crafting, including iron walls, glowing blue bricks, and bone partitions. These blocks can be obtained through mining, crafting new materials, or as rewards from certain quests. Additionally, hidden inside treasure chests, players can discover new blocks to unlock their recipes. To create elaborate underground bases in Enshrouded, you'll need more than just a pickaxe. The game features a flexible terraforming system that lets you dig up various materials from dirt to limestone. This means you can build complex subterranean structures, perfect for roleplaying as a hobbit or dwarf. Instead of using a pickaxe to remove dirt and stone, equip your Construction Hammer and access the building menu. Cycle down using Alt + scroll to reach the terrain options and select one that suits your needs. You can then use the 'delete build piece' function (right click) to remove that section of terrain, shaping it into the desired block. This method is helpful for base-building but not ideal for resource mining. Using a pickaxe will still yield more Dirt and Stone than removing terrain with the building system. Moreover, you won't be able to mine valuable resources like Flintstone or Mycelium using this method. Once you've excavated dirt and rock, refine your hollowed-out area using tools. The Pickaxe can remove small chunks of terrain, while the Rake provides an alternative option for levelling ground. To craft a Rake, you'll need x6 Wood Logs, 2 String, and 2 Stone. The building system also allows you to place terrain blocks around your base. You can choose from various types, including Dirt Farm Soil, Fertilized Farm Soil, Limestone, and more. Additionally, create roads using Dirt Road Blocks, which can be mined with a Pickaxe from paths and roads in Embervale. If you plan to build something tall, consider using scaffolding. This affordable building piece makes it easier to access high places without spending resources on stairs. Scaffolding is also useful for renovating old buildings, allowing you to navigate the exterior without deleting original blocks. When you're done with the scaffolding, simply pick it up like any other furniture item in the game. Building Scaffolding in Enshrouded and Tips for Interior Design Similar to Building Blocks, scaffolding can be crafted at a workbench before being placed in the world. Scaffolding becomes available once the construction hammer has been built. Both types of scaffolding require specific materials. There are various options for interior design, including extravagant exteriors and comfortable homes that give players a rested buff when certain conditions are met. To increase the duration of this buff, players must improve the comfort level of their home by placing items such as hearths, beds, and decorative objects. Players can also use existing buildings to gain inspiration and add complexity by removing blocks from walls and replacing them with different materials. Additionally, Enshrouded has no rules regarding structural support, allowing players to create unique builds, including floating bases and magical levitating objects. Lastly, using dirt and plants indoors can add a touch of fantasy to interior design, particularly in fairy or hobbit-inspired themes. Exploring an area thoroughly will yield a substantial amount of metal scraps. When scavenging settlements or fighting through enemy camps, check every nook and cranny for resources like metal scraps, often randomly placed on tables and corners. These free resources are waiting to be gathered, so keep your eyes peeled and finger on the gathering button to collect everything not fixed to the ground. In this game, anything visually containing metal will drop metal scraps when destroyed, and most objects can be destroyed with the right tool, like a pickaxe for mining metal. Destroying items with metal components, such as fences, barrels, boilers, and cages, can produce metal scraps, although it's a laborious task. The best items to destroy are large metal boilers found in various locations, including Ancient Vaults and settlements surrounding them. Killing non-shrouded human enemies, like scrappers and scavengers, is an effective way to accumulate metal scraps, with each enemy potentially rewarding 1-3 scraps. Looting enemy bodies in settlements can result in a significant payout of metal scraps. The quickest way to kill these enemies is by parrying their attacks and using the Merciless Attack skill. Locations like the Cinder Vault offer opportunities for metal scrap farming, with 12 cryo chambers that drop 3 metal scraps each when destroyed, totaling 36 metal scraps. This location can be easily fast-traveled to, allowing for efficient loot collection and dumping at your base. There's a sweet spot in the game where farming metal scraps can be super efficient - Rookmore, an enemy settlement just north of Cinder Vault near Braelyn Bridge. This place is packed with low-level enemies that drop varying amounts of scrap metal when killed, and there are tons of scraps scattered around on surfaces and in pots/barrels waiting to be collected. After one loop through the camp, we picked up 54 scrap pieces. Since it's easy to get back to, you can use Rookmore as your own personal scrap farm - just level down the enemies, then fast travel out to respawn using that instant respawn trick.
