The book "Hematologia: Fundamentos y Aplicaciones Clínicas" by Bernadette Rodak is an excellent reference guide that covers all the essential material, with a pedagogical approach suitable for both students and professionals in the field of hematology. The book starts with normal hemopoiesis and covers various diseases caused by erythroid, myeloid, lymphoid, and megacariocytic disorders. It also includes sections on complementary tests such as flow cytometry, genetic testing, and molecular diagnosis. The book is divided into seven parts: Part I: Introduction to Hematology * Chapters 1-4 cover laboratory safety, sample collection, microscope use, and quality control in hematology Part II: Hematopoiesis * Chapters 5-11 delve into the morphology and function of blood cells, hematopoiesis theory, and the production and destruction of red blood cells Part III: Evaluation of Blood Cells through Routine Laboratory Testing * Chapters 13-15 discuss routine tests in hematology, extended blood testing, and a comprehensive view of bone marrow examination Part IV: Hematopathology: Disorders of Red Blood Cells * Chapters 16-22 cover anemias, iron metabolism disorders, DNA defects, bone marrow failure, and increased red blood cell destruction due to various causes Part V: Non-Malignant Alterations in White Blood Cells * Chapters 26-27 discuss qualitative and quantitative changes in white blood cells Part VI: Complementary Studies * Chapters 28-31 cover cytochemistry, immunocytochemistry, cytogenetics, and molecular diagnosis in the clinical laboratory Part VII: Malignant Hematopathology: Disorders of White Blood Cells * Chapter 32 introduces the topic of malignant hematopathology. Note that this paraphrased version does not include all the details and specific chapter titles as the original text. Capítulos sobre neoplasias de los leucocitos, incluyendo leucemias agudas y crónicas, trastornos mieloproliferativos y linfoproliferativos. También se abordan síndromes mielodisplásicos, tratamiento de las neoplasias de los leucocitos y equipamiento en hematología. El libro también cubre análisis por citometría del flujo para el diagnóstico hemátológico, análisis de líquidos corporales y trastornos relacionados con la coagulación y la trombosis. Además, se incluye dirección del laboratorio de hematología, equipamiento para estudios de coagulación y evaluación de la hemostasia.
