Navy unit identification code (uic) listing

Navy unit identification code list. Unit identification code list. What is your unit identification code (uic).

US Navy UIC Lookup: Understanding the Unit Identification Code System The US Navy has a vast network of units and commands worldwide, making it necessary to have a unique identification code system for smooth communication and operations. A UIC (Unit Identification Code) is an alphanumeric code assigned to each unit or command within the Navy, ensuring accurate routing and logistics support. By using a reliable US Navy UIC lookup tool, individuals can easily search for any unit's identification code in case of official purposes. This article delves into understanding what US Navy UIC Lookup means and its significance within the naval context, providing an overview of what UICs are, how they're used, and why access to a reliable lookup tool is essential. Using a US Navy UIC lookup tool can streamline the process of finding specific units, saving time and reducing errors. A reliable tool can search through hundreds of codes within seconds, unlike manual searching which leaves room for human error. When selecting a tool, ensure it's trustworthy to avoid compromising sensitive data. Having access to accurate information about every unit under US Naval Command is crucial for effective communication between departments during complex operations. Thankfully, technology has improved, allowing us to utilize UIC Lookup tools that provide reliable information within seconds, saving time and giving peace of mind knowing the data relied upon is trustworthy. The US Navy UIC Lookup system provides numerous benefits for those seeking information about commands within the United States Navy. It enables individuals to track their unit's location, as well as other essential details such as mailing addresses and phone numbers. The system offers an abundance of information on each command, including name, mailing address, phone number, email contacts, unit type, and upcoming deployment schedules. This lookup tool is primarily used by active-duty sailors and dependents seeking medical care through Military Treatment Facilities (MTF). Family members planning to attend events hosted by certain units can also utilize this system to access accurate information about a unit's location, contact details, and other relevant data. The UIC Lookup system serves as an indispensable resource for anyone requiring information on commands within the US Navy. To use the UIC Lookup system, no special requirements are needed; simply having internet access and knowing the correct UIC for the command in question is sufficient. However, it's essential to utilize trusted resources when searching for sensitive data, as some features may only be available through official Navy websites like NMCI or NKO. If specific details are not found using the UIC Lookup system, various options are available, including contacting the command directly via phone or email, seeking assistance from administrative offices, or personnel support detachments (PSD). The UIC is a six-character code used to identify each unit in the US Navy. The United States Department of Defense's Unit Identification Code (UIC) is a unique identifier for each entity within the department. This code is often used on paperwork to assign soldiers to specific companies, which they fall under. The UIC consists of five characters: the first character is the Service Designator, and the next three characters indicate the Parent Unit Designator. For example, in the US Army, the parent unit designation breaks down into type (Army organization), second position (TOE units or Alphabetic Active Component units), and third position (type of unit). The final two characters indicate the Descriptive Designator, which describes the specific characteristics of the unit. Commanding officers use the UIC to identify their unit to higher military units, allowing for easy research and access to information.
