One Second After Trilogy by William R. Forstchen The One Second After trilogy, written by William R. Forstchen, depicts a post-apocalyptic world where the United States suffers an electromagnetic pulse (EMP) attack that sends it back to the Dark Ages. The series consists of three novels: New York Times bestselling author William R. Forstchen brings us a story which can be all too terrifyingly real...a story in which one man struggles to save his family and his small North Carolina town after America loses a war, in one second, a war that will send America back to the Dark Ages...A war based upon a weapon, an Electro Magnetic Pulse (EMP). A weapon that may already be in the hands of our enemies. One Year After: The story begins one year after One Second After ends, two years since nuclear weapons were detonated above the United States and brought America to its knees. After months of suffering starvation, war, and countless deaths, the survivors of Black Mountain, North Carolina, are beginning to recover technology and supplies they had once taken for granted, like electricity, radio communications, and medications. The Final Day: Since the detonation of nuclear weapons above the United States more than two years ago, the small town of Black Mountain, North Carolina has suffered famine, civil war, and countless deaths. Now, after defeating a new, tyrannical federal government, John Matherson and his community intend to restore their world to what it was before the EMP apocalypse. The novel, published in 2009, deals with an unexpected electromagnetic pulse attack on the United States as it affects the people living in and around the small American town of Black Mountain, North Carolina. Jennifer's struggle with Type 1 diabetes becomes a matter of life and death when her family is plunged into chaos by an Electromagnetic Pulse (EMP) that cripples the town's infrastructure and communication systems. Without access to refrigeration, she faces a constant risk of death. As the community grapples with the crisis, Matherson's experience as a paramedic helps him navigate the challenges. The town's residents struggle to cope with the sudden loss of essential services, including food supply chains, which are severely disrupted. The elderly and those requiring ongoing care face particular dangers due to the lack of refrigeration for medication and medical supplies. With no means of communication, it takes two months for the town to establish contact with the outside world. Matherson's family members use their unique skills, such as car restoration and airplane maintenance, to adapt to the new reality. However, without proper sanitation and healthcare, diseases surge, and social order begins to break down. The community is forced to take drastic measures to protect themselves from marauding gangs, leading to violent confrontations and high casualties. As Matherson assumes a leadership role, he must confront the moral complexities of rationing food supplies and making difficult decisions under extreme pressure. Ultimately, Jennifer's condition worsens due to the lack of insulin, and she succumbs to her illness. It is only after a year that the U.S. military arrives to assist in rebuilding the town, revealing that the EMP was triggered by three nuclear missiles launched from offshore container ships. A devastating EMP attack brings down Air Force One, killing the U.S. president and leaving behind a country in shambles. The United States suffers a 90% population decline, from 300 million to just 30 million survivors. China seizes control of the west coast with an occupation force of half a million soldiers, while Mexico occupies Texas and the American Southwest as a protectorate against Chinese rule. In this dire scenario, John Matherson rises to a position of leadership in his community, guided by his experience as a U.S. Army colonel and history professor at Montreat Christian College. His family, including wife Mary's mother Jenny, a nurse named Makala Turner, and various other townspeople, must navigate the crisis and find ways to survive. The book also delves into John's growing relationship with Makala, who becomes stranded in their town after the EMP strike. The story is woven together by the complex web of relationships between characters such as Charlie Fuller, Washington Parker, Dan Hunt, Jim Bartlett, Doc Kellor, Tom Barker, Don Barber, Kate Lindsey, Ben Johnson, and Bob Scales. A non-fiction afterword by U.S. Navy Captain William Sanders provides a technical description of EMPs and references to the reports of the United States EMP Commission. The book reached number 11 on The New York Times best-seller list in fiction and was later adapted for television through MPI Original Films. William R.
