Access to our remote work tools requires approval and monitoring for security purposes. Unauthorized access is strictly prohibited and may result in penalties. Our IT teams are available to support approved users in setting up secure connections. A virtual private network (VPN) allows remote access to the university network, encrypting information shared during the connection. For UF Health / Shands VPN access, use your Gatorlink username and password. If you encounter issues, contact the UF Health IT Helpdesk or call (352) 265-0526. Please notify them that you're using the HSC VPN by visiting ufhealth.org/virtual-private-network-vpn. The UF Health / Shands VPN provides secure access to the university network. Choose a compatible VPN software for your computer operating system, such as UF Gatorlink VPN or UF Anyconnect Client. For installation assistance, visit our website.
