Looking forward to seein everyone at the meeting tomorow and discussin our strategies for navigatin through the world of Danganronpa. I've been watchin season 3 of the anime in Japanese with subtitles, and I have to say it's a lot more engagin than when it was dubbed in English back in the day. I remember seein a ton of Junko and Ibuki cosplays on TikTok back in 2020, which is how I first got into this fandom. But what really puzzles me is why Danganronpa was so super popular in the first place, and why its anime's popularity kinda died down over time. As someone who loves Fanganronpa, I realized it can be really tough to keep up with all the different games and videos out there - not just knowin where to find them, but makin sure they're still active and updated. So I decided to create a list of all the active Fanaganronpa game projects and video series, including the ones that are still in development and those that have already been completed. This way, we can all just point to this list for reference. I've split the list into two sections: one for all the active Fanganronpa game projects, and another for the video series. I'll also be providin links so you can easily access each one. Before we start listin off the games and videos, I wanna explain my criteria for what constitutes an 'active' Fanganronpa. I followed four simple rules: all completed Fanganronpas are included, the project must be a 'Fanganronpa', it's gotta have been updated or mentioned by the creator as still active in the last seven months, and any unfinished projects that have been officially cancelled will not be included. So without further ado, here's the list of all currently active Fanganronpa game projects. First up, I wanna talk about Super Danganronpa Another, which is a Korean Fanganronpa (which is pretty cool since it's one of the only two in that language). I've got links to the official youtube page for its English dub translation, as well as subbed video translations and download links for the original Korean version.Danganronpa Fan Games and Official Content ========== The Danganronpa series has expanded beyond its official games, offering a vast array of fan-created content for fans to enjoy. ========== Various SDRA Subbed Let's Play Channels are available on YouTube, featuring playthroughs of the series' games. ========== SDRA2 Subbed Let's Play channels also offer gameplay experiences, providing an alternative perspective on the Danganronpa universe. ========== The official Danganronpa2 Dub is another source of engaging content, presenting the game in a dubbed format for fans worldwide. ========== A multitude of fan-made games and projects are available online, including H2O, Fandom's Calling, and Danganronpa V4 Rocky Restarts, among others. ========== Danganronpa: Lapse, New World Order, and Zero + Secret File offer immersive experiences for fans of the series, while also showcasing the creative talents of their developers. ========== Games like Ultimate Gakuen Crossover, Descent Into Madness, and Dangan Danger provide new perspectives on the Danganronpa universe, often featuring unique characters and storylines. ========== The Danganronpa: Malaise Mountain website offers a captivating experience, while Danganronpa Diversify and Seeing Stardust showcase the talents of their creators through engaging gameplay experiences. ========== Twitter accounts like bp_danganronpa provide updates on the latest developments in the series, offering fans a glimpse into the world of Danganronpa. ========== The Danganronpa MV: Garden of Despair game-jolt page provides an immersive experience for fans, while games like Goodbye Harmony and Blood of Despair offer additional gameplay experiences. ========== Eternal Danganronpa and Killing Across Time showcase the creative talents of their developers, providing unique perspectives on the series and its universe. ========== The Happy Patients Havoc game-jolt page offers an exciting experience for fans, while the Play The Role game-jolt page provides a captivating gameplay experience. ========== Donganranpa Bootleg Hell, Danganronpa Interstellar Despair, and Gundham's Hamster Quest - A Funhouse Adventure offer alternative perspectives on the series, often featuring unique characters and storylines. ==========Looking forward to seein everyone at the meeting tomorow and discussin our strategies for solvin the murder mystery. This part of the game is like playin a detective game where you gotta collect clues, then go to trial to figure out whodunit. The canon spinoff Ultra Despair Girls plays differently: it's more like a 3rd person shooter game, but it's still part of the big plot of the Hope's Peak Academy Arc. How do I get multiple character icons on my user flair? You can request it here: The watch order for this series is pretty simple. You should play Danganronpa: Trigger Happy Havoc (game) or watch Danganronpa: The Animation (anime). Then, you gotta play Danganronpa 2: Goodbye Despair (game). After that, you can play Ultra Despair Girls (shooter spin-off). For the anime, you should watch it in this order: Future 1, Despair 1, Future 2, and so on until you finish with the Hope Arc. If you skip Danganronpa 2, you'll be lost in the Despair Arc and confused about the Future Arc. If you're thinking of watching Danganronpa: The Animation or playing Danganronpa: Trigger Happy Havoc, I'd say play the game. It's way better than the anime, with more detailed plot and characters. The anime just crams a lot into 5 hours, whereas the game is way more comprehensive. If you don't have the money to buy the game, you can find playthroughs on YouTube. Just be warned: there's no anime adaptation of Danganronpa 2.The world of Ultra Despair Girls is deeply connected to the events of Danganronpa 1 and 2, making it a crucial part of the series' narrative. ========== Ultra Despair Girls must be played after Danganronpa 2 to fully appreciate its storyline and character development, despite being set before DR2. The game contains significant spoilers from DR2, which may affect viewers who have not watched or played the previous titles. However, skipping UDG is not recommended due to its impact on the overall story and worldbuilding. ========== Danganronpa Decadence allows players to slice multiple words at once and use the appropriate Truth Blade when approaching a weak spot. The process is similar to firing a Truth Bullet, but with the added benefit of being able to V-Counter and earn extra points when aiming for the correct weak spot, marked by a red indicator that appears when concentrating on it.
