Youtube tv user guide

YouTube TV is a subscription-based streaming television service operated by YouTube, a subsidiary of Google. The platform offers live linear channel feeds and on-demand content from over 100 TV networks, including ABC, NBC, CBS, Fox, The CW, PBS, and more. It also provides access to over 30 OTT-originated services and a cloud-based DVR. With its dedicated website, mobile app, smart TVs, and digital media players, YouTube TV is available exclusively in the United States, serving around 8 million subscribers as of February 2024. The service initially launched in five major US markets: New York City, Los Angeles, Chicago, Philadelphia, and San Francisco on February 28, 2017.YouTube TV expanded its reach by making its service available in all 210 American television markets. In April 2019, the platform added nine networks from Discovery, Inc., increasing its channel count to 70. This was accompanied by a second monthly price increase without grandfathering existing customers or allowing them to opt out. YouTube TV also signed agreements with Metro-Goldwyn-Mayer to offer Epix as an add-on and with PBS to carry live streams of public broadcaster member stations and PBS Kids Channel. In December 2019, the first PBS affiliate stations were added to the service. YouTube TV further expanded its lineup by reaching agreements with WarnerMedia to carry HBO and Cinemax as add-ons and allowing access to HBO Max. The platform also signed a deal with ViacomCBS to add major cable networks like MTV, Nickelodeon, BET, and Comedy Central. In June 2020, eight of these channels were added, increasing the service's lineup to over 85 channels. This was accompanied by a third monthly price increase without grandfathering or opt-out provisions. The platform has since added the NFL Network to its base lineup and launched a Sports Plus add-on package. YouTube TV also reached an agreement with Nexstar Media Group to carry NewsNation, formerly WGN America, starting in January 2021. In March 2021, seven additional ViacomCBS-owned networks were added to the lineup.The Entertainment Plus add-on is a discount bundle available for $29.99 per month, which includes HBO Max, Showtime, and Starz premium channels.[25] YouTube TV announced the addition of BeIN Sports, Outside TV, VSiN, and other niche sports channels to its Sports Plus tier in September 2021.[26] In May 2022, a secondary Spanish-language base plan was launched for Hispanic and Latino customers, along with a complimentary "Spanish Plus" add-on; this plan includes 28 Spanish-language channels for $34.99 per month, while the Spanish Plus add-on offers over 25 channels for $14.99 per month.[27] A seven-day free trial was offered for the Spanish plan, which can be purchased without requiring a subscription to the main base plan.YouTube TV started allowing subscribers to purchase its premium add-ons la carte in September 2022, with around 20 options available, including HBO Max and Starz.[28][29] In December 2022, YouTube TV was named the exclusive provider of NFL Sunday Ticket, replacing DirecTV as the package's provider after a 29-year run.[30] This move was seen as a win for both YouTube TV and traditional television networks.[31]Neal Mohan, YouTube's chief product officer, stated that this was a logical progression given how people consume sports content and noted that subscriptions are a key part of the service's future.[32] Creators will have exclusive access to games through the NFL channel, allowing them to produce content on the NFL channel as well as their own content for YouTube shorts.[33]NFL Sunday Ticket officially launched as a standalone add-on on August 16, 2023.[34][35] However, in January 2023, YouTube TV dropped MLB Network after the company was unable to reach a new agreement with the channel.[36] A spokesperson for MLB Network stated that they were simply asking for a deal comparable to what around 300 other cable and streaming companies had agreed to in the past.[37]In March 2023, YouTube TV increased its price from $64.99 to $72.99 per month for new members, with existing members who subscribed experiencing the price hike on April 18, 2023.YouTube TV offers several add-on packages and features, including a reduced price for some add-ons like its 4K feature. However, the service has faced issues such as glitches making channels unavailable, affecting subscribers' viewing experience.The service received an unexpected boost from a carriage dispute between Disney and Charter Communications in August, prompting many users to consider switching to YouTube TV. In December, YouTube TV converted its HBO and HBO Max linear/VOD add-ons into a singular Max offering, which includes ad-free access and live feeds of its streaming channels.In February 2024, the service added 18 new channels from Zee Entertainment, while in August 2024, it introduced Filipino Plus add-on packages featuring ABS-CBN's TFC. However, on December 12, 2024, Google announced that YouTube TV's price would increase to $82.99 per month for new customers and $82.99 starting January 13, 2025, for existing customers.YouTube TV offers a cloud-based DVR service with unlimited storage that saves recordings for nine months. The feature is available to subscribers of its premium add-ons who do not have an accompanying subscription to the base package. The service allows up to three simultaneous streams and can be shared among six accounts.YouTube TV has faced numerous disputes and blackouts with various networks over contract renegotiations. In March 2020, the platform reached a new deal with Sinclair to carry Fox RSNs except for three. However, in October of that year, YouTube TV dropped several networks, including those carrying the Bally Sports moniker, after failing to agree on a renegotiation. The following month, NESN was also removed from the service.In September 2021, YouTube TV entered into a dispute with NBCUniversal over contract renewal, with NBC warning that its channels would be removed if an agreement wasn't reached by the end of the month. The two parties eventually agreed to a short extension before reaching a deal a day later.The next year saw further disputes, including one with The Walt Disney Company in December 2021, which resulted in YouTube TV's first contract-related blackout. However, this was resolved within a day. In January 2023, MLB Network was pulled off the platform after a failed contract renewal agreement.More recently, local channel KTVK was removed from YouTube TV due to a dispute with its parent company, Gray Television, on November 18, 2023. This affected viewers' ability to watch locally televised Phoenix Suns and Mercury games not carried by TNT, ESPN, or ABC.In February 2025, YouTube TV engaged in another dispute, this time with Paramount Global over contract renewal, warning customers about potential removal of several Paramount-owned networks. The two parties eventually reached an agreement on the 13th, averting a shutdown that would have impacted access to 2025 NCAA Division I men's basketball tournament games and Masters Tournament coverage.YouTube TV is a live television streaming service that was launched in April 2017. It has had some significant changes and updates since its launch. In September 2022, it added new features. However, initially, it was removed from the Roku channel store in April 2021 but was later re-added to it in December of the same year.The service has partnered with various sports leagues, including MLB and NBA, for exclusive streaming rights. YouTube TV also launched in Glendive, Montana, making it available nationwide. In addition, it added more channels and raised its price for the second time.The list of updates and changes on YouTube TV includes the addition of various channels, price hikes, and removals of certain services. In February 2020, it was announced that HBO and HBO Max would be available on YouTube TV. The service also added 14 cable networks from ViacomCBS in May 2020 under an expanded pact. However, this came with a 30% price increase to $65 per month.In January 2021, WGN America and NewsNation were added to the lineup. YouTube TV bundles HBO Max, Showtime, and Starz for users starting February 18, 2021. By September 2021, more channels were added to the Sports Plus add-on.YouTube TV also expanded its Spanish-language content with the introduction of the Spanish Plus and Spanish Plan in October 2022. In November 2022, it became possible to purchase certain add-ons without subscribing to the base plan. The service is now reselling subscriptions to 34 streaming services, including Paramount+ and Showtime.In December 2022, YouTube TV announced a deal with the NFL to distribute NFL Sunday Ticket on the platform. This seven-year agreement allows fans to access live games through YouTube TV's Primetime Channels. However, in January 2023, MLB Network was dropped from the lineup after its carriage deal expired.As of May 1, 2023, YouTube TV increased its price to $72.99 per month due to rising "content costs."Various articles and press releases were published in 2023 and 2024 regarding YouTube's services and agreements with other companies. For instance, on September 28, 2023, Deadline Hollywood reported on the success of NFL Sunday Ticket on YouTube, exceeding expectations. Additionally, an unexpected collaboration between Disney and Charter was mentioned.In December 2023, Warner Bros. Discovery announced that Max would be available on YouTube Primetime Channels. TechRadar also covered this news, noting that users would not have to deal with ads.By December 12, 2024, the price of YouTube TV had increased by $10 to $82.99 per month, as reported by Deadline.Archived articles from January 2020 and May 2021 discussed disputes between Roku and Google over the availability of YouTube TV on Roku devices. However, a multi-year agreement was eventually reached in December 2021, ensuring that YouTube would remain available on the platform.In February 2020, it was announced that YouTube TV would continue to stream Fox RSNs and YES Network during negotiations with Sinclair. By March 2020, an agreement had been reached for 19 Fox regional sports nets with Sinclair, but the YES Network and two other networks were dropped from the deal.Various articles in September 2021 reported on a potential dispute between NBCUniversal and YouTube TV over channel access. However, a short extension was agreed upon to avoid channel disappearances, and eventually, an agreement was reached to keep the channels available.Throughout these events, several sources provided updates and commentary, including The Verge, Variety, Engadget, CNBC, and more.YouTube TV may lose access to additional channels in contract dispute with Paramount, including CBS, Comedy Central, and MTVThree Angels Broadcasting Network (3ABN) is a Christian television and radio network based in West Frankfort, Illinois. The network broadcasts Seventh-day Adventist programming, music, and health-related content. Although not officially affiliated with any church or denomination, 3ABN's focus on Adventist theology and doctrine is evident in its programming. Founded by Danny Shelton and his wife Linda Shelton in 1984, the network has undergone significant changes over the years.In recent years, 3ABN has faced several controversies. In 2010, Tommy Shelton, brother of Danny Shelton and a former production manager, was arrested for taking indecent liberties with a child. He pleaded guilty to two felony counts and was sentenced to six years in prison. A lawsuit filed against the network in 2011 claimed negligence in handling allegations against Tommy Shelton.The network has also been involved in a land dispute in the Bahamas since 2011. A visually impaired man alleged that he donated one to two acres for a church sanctuary, but 3ABN claimed he signed away full control of his 400-acre property through an irrevocable charitable trust agreement.In addition to these controversies, Danny Shelton resigned as president in September 2019, and Brenda Walsh was fired from her hosting duties on "Kids Time" in December 2018. The network accused her of mishandling money raised for a children's network in Tennessee, despite promising to give her ministry $2 million in a separation agreement.The Three Angels Broadcasting Network was involved in various controversies and lawsuits related to child sex abuse allegations. In 2010, the Fairfax County Police department received reports of sex assault victims coming forward. Ex-pastor in Fairfax pleaded guilty to molesting two boys in 2010. A plea deal was rejected in a molestation case involving a pastor accused of sex abuse in 2011.A former pastor was sentenced after an Alford plea on molestation allegations in 2012. The Christian network was sued in a child sex abuse case in 2011. The ATSC digital TV standard uses the modulation method 8VSB, which is used primarily in North America. It is different from the DVB-T standard that uses COFDM. A modulation method specifies how the radio signal fluctuates to convey information. The specifications for a cable-ready television might state that it supports 8VSB for broadcast TV and QAM for cable TV.In essence, 8VSB converts a binary stream into an octal representation by amplitude-shift keying a sinusoidal carrier to one of eight levels. It is capable of transmitting three bits per symbol. The resulting signal is then band-pass filtered with a Nyquist filter to remove redundancies in the side lobes, and then shifted up to the broadcast frequency.8VSB is an 8-level vestigial sideband modulation that attempts to eliminate spectral redundancy by removing one symmetrical carrier side-band. However, filters with zero transition bandwidth cannot be realized, leaving a vestige of the redundant sideband, hence the name VSB.VSB transmission employs an 8 MHz channel for broadcast ATSC, featuring a symbol rate of 10.76 megabaud, gross bit rate of 32 Mbit/s, and net bit rate of 19.39 Mbit/s of usable data, although the latter is reduced due to forward error correction codes. The modulation scheme uses eight signal levels selected by a trellis encoder. Other similar modulations include 2VSB, 4VSB, and 16VSB, with 16VSB initially intended for ATSC digital cable but replaced by quadrature amplitude modulation (QAM) due to its cost-effectiveness. This section's accuracy is disputed.One advantage of VSB for broadcasters is its reduced power requirements to cover an area comparable to NTSC systems, reportedly outperforming COFDM in this regard. The lower peak-to-average power ratio needed compared to COFDM also contributes to this benefit. VSB transmitters require a peak power capability four times their average power, and the technology is more resistant to impulse noise.Some stations can maintain coverage while transmitting at 25% of analog broadcast power levels. While NTSC and other analog television systems use vestigial sideband techniques, ATSC 8VSB transmissions filter the unwanted sideband more effectively using a Nyquist filter. ReedSolomon error correction is used to ensure data integrity.In 2005, the ATSC published standards for Enhanced VSB (E-VSB), which allows DTV reception on low-power handheld receivers with smaller antennas using forward error correction. E-VSB uses the same 8VSB transmission as traditional ATSC broadcasts.There was a proposal to replace 8VSB with COFDM, but the FCC has consistently maintained that 8VSB is better suited for U.S. digital television broadcasting due to its superior threshold or carrier-to-noise (C/N) performance, higher data rate capability, and reduced transmitter power requirements.The standard for digital television transmission, DVB-T1, has a limited bandwidth allocation, which results in reduced payload capacity compared to other standards like COFDM. In fact, many European countries have adopted 1280720p as their high-definition standard due to this limitation. The introduction of DVB-T2 aims to improve the ability of terrestrial transmissions to carry 19201080p content. Despite this, the adoption of 8VSB-based ATSC standards in the US makes a switch to COFDM challenging.Vehicles that use the older 8VSB (vestigial sideband) technology have limitations when receiving signals in urban environments, as well as when moving or experiencing multipath interference. While newer 8VSB receivers are better at handling multipath issues, they still struggle to maintain a signal while in motion. In contrast, COFDM (Coded Orthogonal Frequency Division Multiplexing) modulation can provide better reception in these situations. However, in less populated areas, the lower power requirement for 8VSB transmission might give it an advantage over COFDM. Enhanced VSB systems like E-VSB, A-VSB, and MPH were also being developed to address some of 8VSB's limitations. To improve multipath reception with 8VSB, additional forward error-correcting codes can be used, but this decreases the useful bit rate. The next major TV standard in the US, ATSC 3.0, will utilize COFDM for broadcasting and studio-to-transmitter links.Type of vestigial sideband modulation, known as 4VSB, is a form of radio transmission that can transmit two bits of information at a time. This type of modulation is slower but more rugged than other forms like 8VSB and 16VSB, which can transmit four and eight bits respectively. While 2VSB is even more rugged, it is also slower.This page displays a list of links to Wikipedia articles related to the topic. It appears to be an index or a compilation of pages from the "Special:WhatLinksHere" feature, which highlights interconnected content on the site.
