Headsets TWS V5.1 Wireless Headset: A Comprehensive Guide to Operating and Pairing The Headsets TWS V5.2 32 Using Headsets TWS V5.1 Wireless Headset for Seamless Listening Experience Get the most out of your wireless earbuds with this comprehensive guide. Our high-quality earbuds provide a seamless listening experience, and we're here to help you operate and pair them with ease. ****Product Specifications:**** - ****Wireless Version:**** V5.1 - ****Working Distance:**** 10m-20m - ****Battery Type:**** 3.7V, >50mA Li - ****Charging Time:**** 1-2H ****How to Use Your Earbuds:**** 1. Make sure the charging case has electricity. 2. Take out the earbuds and wear them on your left and right ears. 3. The earphones will automatically turn on and pair with your phone. ****Tips for Care and Maintenance:**** - Keep the earbuds away from obstructions to maintain connectivity. - Charge the charging case and earphones before first use or long periods of non-use. USB Cable connects to the mobile's USB port to charge the Charging Case indicator light turns green during charging and off when fully charged. For initial use or after extended disuse, charge the earbuds and charging case beforehand. Ensure a clear environment within 10 meters for optimal performance. Indicator descriptions: * Charge earbuds: Place earbuds in the charging case and cover to charge. + Earbud indicator: Red light indicates charging; red light when fully charged. Charging Case flashes green, then turns off after charging. * Charge charging case: Plug USB/1A into the charging port to charge. + During charging, the middle digit of the charging stand display shows charging case power. When displayed as "100," the battery is fully charged. Charging case indicator light flashes green and turns off after charging. * Charge mobile phone: Connect USB Cable to the mobile's USB port to charge. In master-slave synchronous binaural mode: * Double-click one headphone for the previous song; double-click the other for the next song! * Volume control: Quickly triple-tap "A" for volume+, and triple-click "B" for volume-. Single Earbud Mode (Version 5.1) enables seamless connection, master-slave synchronization, without needing to distinguish primary and secondary. Single ear use: * No need to switch signals; simply connect a good signal name for the first time, then take out any earphone for automatic connection. * No need to pair single ear connections separately. Signal names: * "L" (Left) * "R" (Right) If unable to use both ears, delete one ear signal and manually re-form the team! Special Note: The two earbuds are well-paired before packaging; if they fail to pair due to wrong operations, follow these steps for re-pairing: 1. Power off both earbuds. 2. Press the buttons of both earbuds simultaneously and hold for about 10 seconds. 3. Blue lights will sparkle, followed by red and blue lights flashing alternately. 4. Release the buttons; the earbuds are now paired and ready for phone searching. Note: This operation also clears the team record between the phone and earbuds, so you need to delete the Bluetooth pairing record before reconnecting with your phone. Care and maintenance: * Avoid misoperation caused by collision by putting the earbud in a charging case before pocketing. * Do not use abrasive cleaners for cleaning. Don't expose the Bluetooth earbuds to extreme heat or flames, and avoid drops, water, and strong magnets. Keep them away from fire sources, appliances, and speakers when in use. Also, don't leave them in extremely cold or hot temperatures (use them between -10°C-55°C). If not used for a while, charge them fully and occasionally to prolong their lifespan. Use the standard 5V charger and avoid disassembling or tampering with the product. Most importantly, do not use the earbuds while they're charging. Warranty information is included in the packing details. Reasons why earbuds fall out: Earbud size mismatch, either too big or too small for the ear canal. TWS can potentially damage hearing if used improperly or at high volumes. A flashing red light on TWS indicates a low battery, while an orange light means it's charging. It's safe to sleep with TWS earbuds as long as they're comfortable. Disadvantages of TWS include the hassle of taking them out for conversations and potential audio disruptions. If TWS won't pair, try turning off Bluetooth on your device. TWS V5 1 Waterproof: Effective Sweat-Resistant Design TWS earbuds from case turn on automatically when removed, with an option to sync them manually by double pressing both earbuds simultaneously. The device is IPX7 waterproof and sweat-proof, preventing damage from excessive moisture.
