========== The Creative Commons License: A Freedom for All A license that gives you the freedom to share, adapt, and build upon a work is quite powerful. This particular license allows you to use, modify, and distribute the material without restrictions as long as you give credit and follow certain rules. Under this license, you can take the original material and change it into something new. You don't need permission from anyone else for your changes, but you do have to share those changes with others under the same license. This ensures that everyone involved stays on the same page. There are no limitations on what you can or cannot use this license for. However, there may be exceptions where certain rights are protected by law or regulation. You should always check these exceptions before using the material in any way. In summary, this license is all about giving people the freedom to create and share their work while still maintaining control over how it's used.In the gritty world of Escape from Tarkov, players are immersed in a military simulation experience akin to the ArmA series. The game's complexity shines through in its customization options for weapons, allowing players to craft their arsenal by selecting and combining various components such as scopes, grips, and stocks. This level of detail is rare in first-person shooter games, adding a layer of realism to the gameplay. Players can also equip their characters with military gear like armored vests, rigs, and helmets, further immersing them in the world. As players navigate the game's environments, they have fine control over movement speed and crouch height, creating a sense of authenticity. The absence of an on-screen ammunition counter requires players to manually check their magazine, adding a touch of realism to the experience. The game's health system is equally detailed, with each limb having hit points that must be addressed with specific medical supplies, such as bandages for bleeding. The game's ballistics engine models realistic ricochets and bullet penetration, while scavenging items from containers and bodies takes time, with each item revealed individually during the search process. Players must also monitor their energy and hydration levels throughout the raid, adding an extra layer of challenge to the gameplay.Escape from Tarkov: A Universe of Combat and Survival ========== Buyanov and the team developed their skills through working at Absolutsoft on Contract Wars.[1] Both games are set in the Russia-2028 universe.[21] Some staff also have military experience, with one former Spetsnaz operator.[21] The developers recorded weapon sounds by recording real weapons in abandoned warehouses.[4] During the game's beta period, updates were released regularly, including new features, maps, and equipment.[22][23] Major updates often include a "wipe", resetting in-game progress for all players.[24] In 2023, Battlestate Games released Escape from Tarkov: Arena (EFT: Arena), a competitive mode with short rounds and team-based matchmaking.[25] EFT: Arena was published on the Epic Games Store in April 2025, coinciding with the battle pass system's release.[25] The game features an esports scene, starting with a DreamHack tournament in 2023.[26] Battlestate Games stated that Escape from Tarkov would be a full purchase release without free-to-play or microtransaction elements.[27] There is a possibility of a Steam release after the official release and downloadable content.[28] The game started as a closed alpha, available to select users on August 4, 2016.[29] Battlestate announced an extended alpha stage in December 2016, with preordered players guaranteed access to the alpha build.[30] All players had a non-disclosure agreement (NDA) and limited video coverage until March 24, 2017, when the NDA was lifted.[31] The game entered closed beta on July 28, 2017, available to all players regardless of pre-order edition.[32] In early 2020, the game's popularity surged on Twitch, with a promotional event providing in-game items for watching streams.[33] This led to server issues and long matching times.[34] The game reached its peak concurrent player count of 200,000 in May 2020, following a major update.[35] The developers have published live-action miniseries, including Raid, which consisted of five episodes from March 2019 to February 2021, released for free on YouTube.[36] A film version was also released, with over 28 million views.[37] Their second series, The Chronicles of Ryzhy, began in October 2022 and concluded its first season in December 2022.[38]Escape from Tarkov's Controversies and Changes This caused confusin among playrs, as concerns were raised about the boundries of legitemate item tradin.[43] Battlestate Games has been accused of abusing YouTubes DMCA system to remove negitive videos of Escape from Tarkov. YouTuber Eroktic released a video accusin the company of leakin user information, resulting in Battlestate Games issuin DMCAs on 47 YouTub videos posted by the user, two of which were removed for allegedly spreadin false informashun and the rest for spreadin "negitive hype".[44] While Battlestate Games initally stated that they had only used DMCA claims on one user, it was later reveald that anothr YouTuber had recieved claims – both reported losin viewership and income as a result.[45] The Battlestate Games Twitch account was temporarly banned in December 2019 after an employee pointed an empty gun at his head and pulled the trigger while streaming on the website.[12] In a 2016 intervew, one of the game's developers stated that there would be no women or playable female characters in the game because "women can't handle that amount of stress. There's only place for hardened men in this place."[46] After apologizin for the comments, Battlestate Games clarified their position in 2020, stating that while the employee's comments did not reflect the companys position or opinion as a whole, there would be no playable female characters due to "game lore and more importantly, the huge amount of work needed with animations, gear fitting, etc." Battlestate Games also stated that the employee would be reprimanded for his comments.[47] In April 2024, Battlestate Games announced a new purchasable version of the game referred to as the Unheard Edition, which includes features such as exclusive equipment and access to an exclusive PvE server. In January 2024, another version of Escape from Tarkov, the limited-time Edge of Darkness Edition, which was cheaper than the new edition, had been discontinued.[48] Prior to that, Battlestate Games had stated that owners of the Edge of Darkness Edition would receive "free access to all subsequent DLCs" for the game. With the announcement of the Unheard Edition (whose PvE mode was labeled a "feature" and thus non-DLC), this was then revised to six months of free access, resulting in criticism from the game's player base and accusations of turning the game into a pay-to-win title.[49][50] On 27 April, the developers announced that purchasers of the Edge of Darkness Edition would now be given full access to the PvE mode once version 1.0 of the game released, slated for later in the year, and that those players would also be granted a 50% discount in upgrading to The Unheard Edition should they choose to do so.[51] The following day, Battlestate Games revised their statement to make access open sooner, but in waves as more server capacity is added. On 18 July, Battlestate Games launched the PvE mode as a purchasable expansion for players who did not own the Unheard or Edge of Darkness editions.[52][53]The survival shooter Escape From Tarkov was first mentioned in an IGN article by David Jagneaux on January 25, 2018. The game's open-world concept and high level of detail were highlighted. According to the Escape from Tarkov Forum, a podcast summary titled "BSG: Behind the Beta" discussed the game's development. In February 2020, Ketchua wrote an article for GosuNoob.com Video Game News & Guides comparing the BEAR and USEC factions in the game. ScreenRant also published a piece on the differences between these factions. Daily Esports provided guidance on eliminating Scav Bosses, while Invenglobal.com shared information about the game's popularity. VG247 praised the game's level of detail in 2016, and Polygon expressed enthusiasm for its potential to revive the hardcore survival genre. In July 2020, Saed reported that Scavs would soon be able to loot bodies, perform mag checks, and push players in groups. Matthews mentioned that a new map would be larger than previous ones. Escape from Tarkov's server issues and long queue times were addressed by the developers. The game reached 200k concurrent players in May 2020, according to PCGamesN. The Chronicles of Ryzhy, a YouTube series, offered insight into the game's mechanics. Kotaku and PC Gamer featured articles highlighting the game's challenging nature and potential. Escape from Tarkov has had a closed alpha since August 4, 2016, and its preorder page is available online. A second YouTuber was harassed with DMCA complaints by the Escape from Tarkov team in January 2019.The lack of playable female characters in Escape from Tarkov has sparked outrage among fans, with many expressing their disappointment over the game's limited character options. ========== Several gaming news outlets have reported on this issue, including The Verge and Forbes. According to a recent article by Mike Stubbs at Forbes, the game's EoD Edition will be removed in 13 days, while an alternative edition is now available for purchase, featuring a new PvE mode.The key to success in Escape from Tarkov lies in utilizing valuable items, such as LABS keycards, which can be found at extraction points. These keycards often have a purple background, indicating their high value, and should be inspected before being used. As a Scav player, the goal is to scavenge for loot, including dead PMCs, without engaging in combat unless necessary. Paraphrased text here ========== As an EFT beginner, it's recommended to avoid using injectors (stims) due to their high cost and potential side effects. Instead, focus on purchasing injury treatment items like surgical kits, splints, bandages, hemostatic agents, and balms. These can help in emergency situations, such as fixing dead body parts or controlling heavy bleeding. Medkits are another essential item to consider, offering different levels of treatment and varying durability. The Salewa medkit is a popular choice due to its ability to heal up to 400 health points while also addressing light and heavy bleeds. Painkillers like Analgin are also crucial for managing pain during raids. These can be used in conjunction with other methods, such as using a balm or Vaseline on high-end equipment. When it comes to hydration and energy management, it's essential to prioritize food and water intake, especially in raids. Bringing these items into the raid can help maintain optimal levels and avoid unnecessary losses. The pouch slot is where secure containers are stored, providing a safe place for valuable items like keys or medication. This feature allows players to keep their belongings secure even if they die. Accessing the Stash, which is essentially free storage space, can be done by clicking on the character tab in the main menu. However, this has limited capacity, and upgrading the Stash or purchasing additional containers can increase storage space. Lastly, insurance is a vital tool for minimizing losses when starting out. By insuring items, players can recover them after 24 hours if they're not looted by others during a raid or extraction.The Prapor and Therapist Dealers: Unlocking Rewards in Escape from Tarkov ========== In Escape from Tarkov, two dealers stand out for their valuable rewards: Prapor and Therapist. Each offers a unique set of items and quests that can be completed to gain access to better gear and resources. Prapor offers Russian firearms, ammo, mods, as well as certain categories of items that players can sell to him. However, the prices offered by Prapor are not always the best option. It's often better to sell items on the Flea Market, which can fetch significantly higher prices for rare or valuable items. Therapist, on the other hand, sells medication, drinks, food, and maps. The therapist's quests offer some excellent rewards, including a "Secure container epsilon" that is a significant upgrade over the Alpha container. Additionally, Therapist provides a steady supply of water bottles and medication, making it an essential stop for new players. Each of the eight dealers in Escape from Tarkov has four loyalty levels, or tiers, which can be increased by completing their tasks and meeting certain prerequisites. These tier levels unlock new items that can be purchased from the dealer, providing players with access to better gear and resources. It's also worth noting that some items found in raids can be sold on the Flea Market for a significantly higher price than they would fetch at the dealers. Players should keep their "found in raid" items in their stash until they unlock the Flea Market, as these items have the potential to sell for tens of thousands of roubles. The Flea Market works on a seller-reputation system, where players earn reputation points for each sale or buy made. As reputation increases, so do the number of offer slots available for listing items on sale. With a good reputation, players can list more valuable items and increase their chances of making a profit. With seven maps to choose from, including the end-game map Labs, Escape from Tarkov offers a wealth of opportunities for players to grind experience and equipment. However, each map also has its own set of hidden stashes containing randomly generated items, providing an added layer of challenge and reward. Overall, understanding how the Prapor and Therapist dealers work is crucial for success in Escape from Tarkov. By completing their quests, increasing loyalty levels, and utilizing the Flea Market, players can gain access to better gear and resources, ultimately improving their chances of survival in this challenging game. ========== In Escape from Tarkov, players can utilize various strategies to acquire resources, including running customs and exploring hidden stashes for valuable loot. This approach proves particularly effective during early progression of wipes, as these stashes often contain essential items needed for quests. Utilizing a map to locate hidden stash locations is crucial due to their well-concealed nature. The game features several bosses that can spawn on specific maps, including Reshala on Customs, Shturman in the Woods, and Glukhar on Reserve. These encounters offer high-quality loot but are not guaranteed during every raid. To successfully exit a raid with all items and loot, extraction is the only viable option. Customs is widely regarded as one of the most enjoyable maps due to its ease of navigation and generous loot supply. Players can find hidden stashes along their route towards an extract point, providing opportunities for additional valuable loot. However, careful attention must be paid to spawn points, as enemies often spawn close by. Learning these spawn points can provide a significant advantage in shootouts. Early-game Prapor and Therapist tasks are commonly located on Customs. Additionally, the recently reworked Woods map offers extensive loot boxes and a lumberyard with a rare Labs Keycard. Looting Shturman from this location yields a valuable cache key, allowing access to his stash. The Factory map is ideal for teamplay, as only five PMCs can be present at a time, reducing the risk of encounters. Farming Scav kills provides substantial experience gains but is often hindered by AI Scavs and player Scavs joining the raid. Every EFT player has a personal Hideout that offers bonuses, services, and passive income opportunities. These modules provide valuable benefits, including accelerated health, energy, and hydration regeneration. Players can also mine in-game bitcoins for additional revenue or send out Scavs on missions to gather essential items. ========== Hi everyone I'm Dominik Stefancic a programmer who loves gaming I enjoy playing different types of games including ARPG's and MOBA's I like to share my knowledge with others so they can get better related escape from tarkov is a complex game that requires learning new things to improve your skills in this game you shouldnt worry about dying too much just avoid gear fear even experienced players die sometimes thats how tarkov works Choosing between the BEAR and USEC factions is the first decision you will make in tarkov it affects your starting equipment clothing and gameplay on lighthouse map BEAR faction has a harder time fighting rogue AI forces but other than that there are minimal differences just pick the side thats more attractive to you note that faction choice is permanent until a full wipe Your stash inventory has different tabs for checking stats medical progress skills tasks and gear screen pay attention to your weight it will encumber you if it exceeds 35kg keep an eye on hydration and energy levels or else youll start taking health damage make sure to eat drink and take meds as needed survival in tarkov depends on two equipment factors armor and ammo wear the best armor you can afford and use ammo that can penetrate higher class armor aim for headshots whenever possible Tarkov has a complex medical system each body part has individual hp losing a limb will prevent sprinting losing an arm will hurt your aiming abilities blacked out limbs spread damage to other parts prioritize fixing them with medical kits bandages stop heavy bleeding splints mend fractures manage your med supplies efficiently and get good medicine skills to survive longer buy sell and complete quests for traders to increase reputation and unlock better gear The hideout is a place where you can build facilities to unlock bonuses it has different items like bigger stash size shooting range and bitcoin farm prioritize upgrades that improve quality of life like stash size then optimize profit later pmc raids are played with your character and main loot death will result in losing non secured gear scavs let you spawn into ongoing raids with random loot killing other scavs is penalized while cooperation is rewarded try alternating pmc and scav runs use pmc for quests and fighting and scav to make moneyLoot like a pro, but dont overthink it. its all about finding the right spots to exfil fast. ========== Scav huntin is hard. the devs limit how much u can grind before ur power level stops growin. so check yer map guide 4 extraction points b4 goin in 2 raid mode. dont wanna get stuck w/ no way out! Tarkov maps r all over the place, dont rely on the game 2 show u where its at. keep it open on another monitor or tablet. Scavs, Raiders, & Rogues r the bane of ur existance. theyre like bosses but worse! they got superior firepower & aimbot accuracy so u gotta be sneaky or get caught. hold tight in narrow spots or snipe from a distance 2 stay alive. these guys are NOT 4 playin w/ kids! get good loot & sell it on the flea market, thats how u make that dough! focus on areas like Lighthouse & Streets where the tech spawns r plentiful & rare items drop. small stuff like gold chains & bitcoin r more profitable dan big guns & armor. learn what sells well & prioritize. now u got the basics down pat, just practice & stay chill. dont let raid stress get 2 u!
